CHAPTER 1

Welcome to Bizflow POS

Bizflow POS is a point-of-sale and back-office system made for medical stores and general stores in Pakistan. It sells by tablet, strip or box, keeps every batch with its expiry date, runs customer khata (udhaar), and keeps working when the internet is down. Every screen can be shown in English or Urdu.

This manual explains every screen, every field and every button, in the order you will meet them. Each screenshot comes from the real app. The store in the pictures is a demo store called **Bizflow Pharmacy**.

1.1 Who uses what

Person	Signs in with	Can use
Owner / Admin	Password (8+ characters)	Everything: the Backoffice (stock, purchases, reports, khata, settings) and the till.
Cashier	4-digit PIN	The till only: sales, returns, cash in/out, closing their own shift.
Cashier with "Can approve"	4-digit PIN	The till, and can also approve other cashiers' actions with their PIN (for example a senior salesman or manager).

1.2 Words used in this manual

Main PC	The one computer in each shop that keeps the store's database. Use your most reliable computer for this.
Extra till	Any other computer in the same shop. It connects to the main PC over the shop network (Wi-Fi or cable).
Store code / Till code	Short codes such as `B1` and `T01`. They are printed in every receipt number, e.g. `B1-T01-000013`.
Smallest unit	The smallest thing you can sell: a tablet, a capsule, a bottle, a piece. Stock is always counted in this unit. Bigger packs (strip, box) are defined as "holds N smallest units".
Batch	A lot of stock with its own batch number, expiry date and cost. The till always sells the batch that expires first (FEFO: first-expiry, first-out).
Khata (Udhaar)	A customer's credit account. Bills put on khata are paid later.
Shift	One cashier's working time on one till, from opening cash to the closing count and Z-report.

Manager PIN / approval	Some actions (big discounts, refunds above a limit, cancelling a bill…) need another person with approval rights to type their PIN.

1.3 How to read this manual

- **Bold boxed words** are buttons or labels exactly as they appear on screen.
- F2 style keys are keyboard keys.
- Field tables list every box on a screen: what to type and what it does.

> **TIP**
> Green boxes give shortcuts and good habits.

> **NOTE**
> Blue boxes explain how something works behind the scenes.

> **IMPORTANT**
> Amber boxes warn about things that cannot be undone or that affect money.

CHAPTER 2

Installing and first-time setup

2.1 Installing the app on Windows

1. Copy the installer `Bizflow POS_x.y.z_x64-setup.exe` to the computer (USB drive, WhatsApp desktop or download).
2. Double-click it. If Windows shows **Windows protected your PC**, click **More info** and then **Run anyway**. This appears because the installer is not code-signed yet; it is safe to continue.
3. Follow the installer. When it finishes, open **Bizflow POS** from the Start menu or the desktop icon.
4. Repeat on every computer in the shop. Do the main PC first.

WHERE YOUR DATA LIVES

On the main PC the store database is the file `store.sqlite` in `C:\Users\<you>\AppData\Roaming\pk.medstore.pos\`. Daily copies are kept in the `backups` folder beside it (see Daily backup files).

UPDATING TO A NEW VERSION

Simply run the new installer over the old one. Your store data is kept. Take a backup first (**Store, Users & Settings → Back up now**) to be safe.

2.2 Step 1 — Set up this computer

The very first screen asks what this computer is. You see it only once per computer.

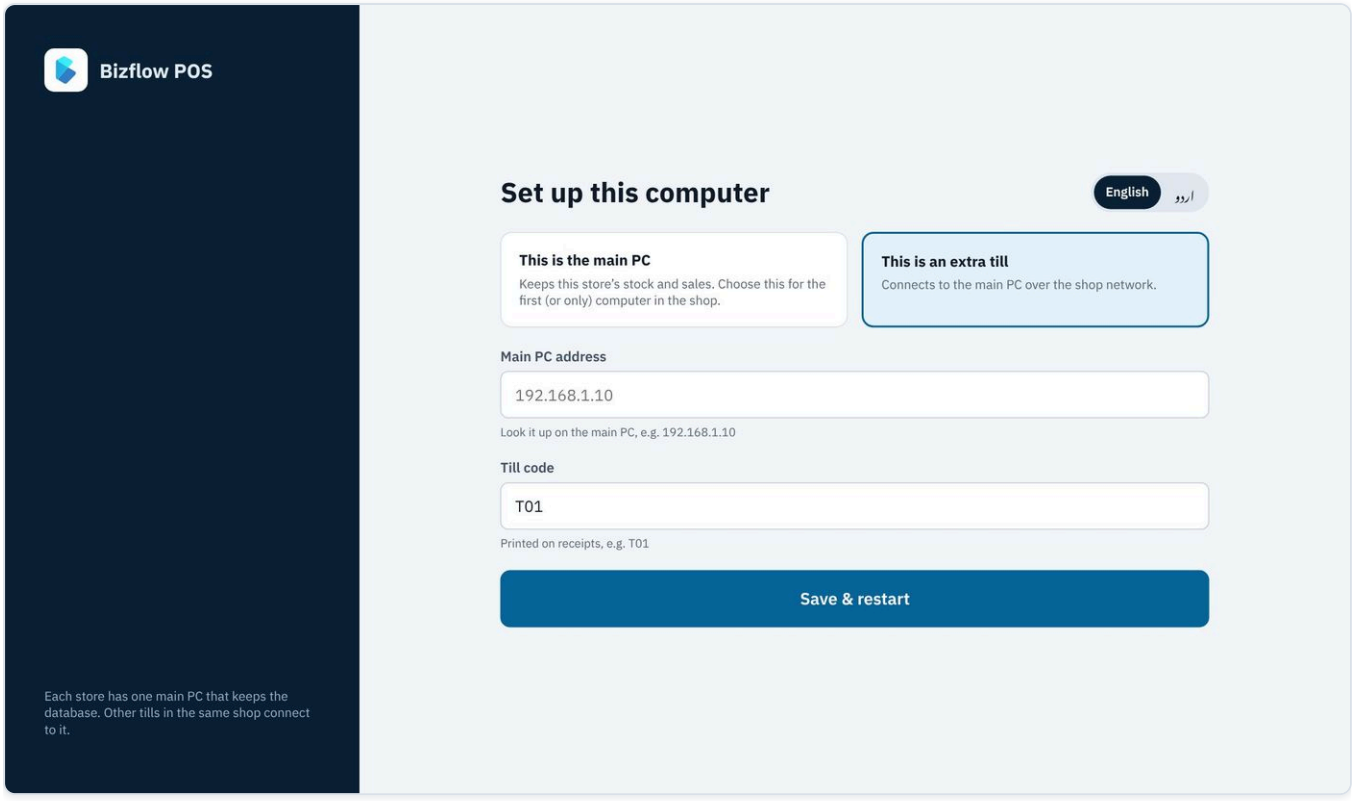

Figure 1 · Set up this computer

Field / button	What to do
This is the main PC	Choose this on the first (or only) computer in the shop. It will keep the store's stock, sales and khata.
This is an extra till	Choose this on any other counter computer in the same shop.
Main PC address	Extra tills only. The network address of the main PC, e.g. `192.168.1.10`. You can see it on the main PC in Windows network settings. Give the main PC a fixed address in your router so it never changes.
Till code	A short name for this counter, e.g. `T01` for the main counter, `T02` for the second. It is printed on receipts and must be different on every computer.
English / اردو	Switches the language of this screen.
Save & restart	Saves the choice and restarts the app.

2.3 Step 2 — Set up your store (main PC only)

On the main PC the next screen creates the store and the owner login.

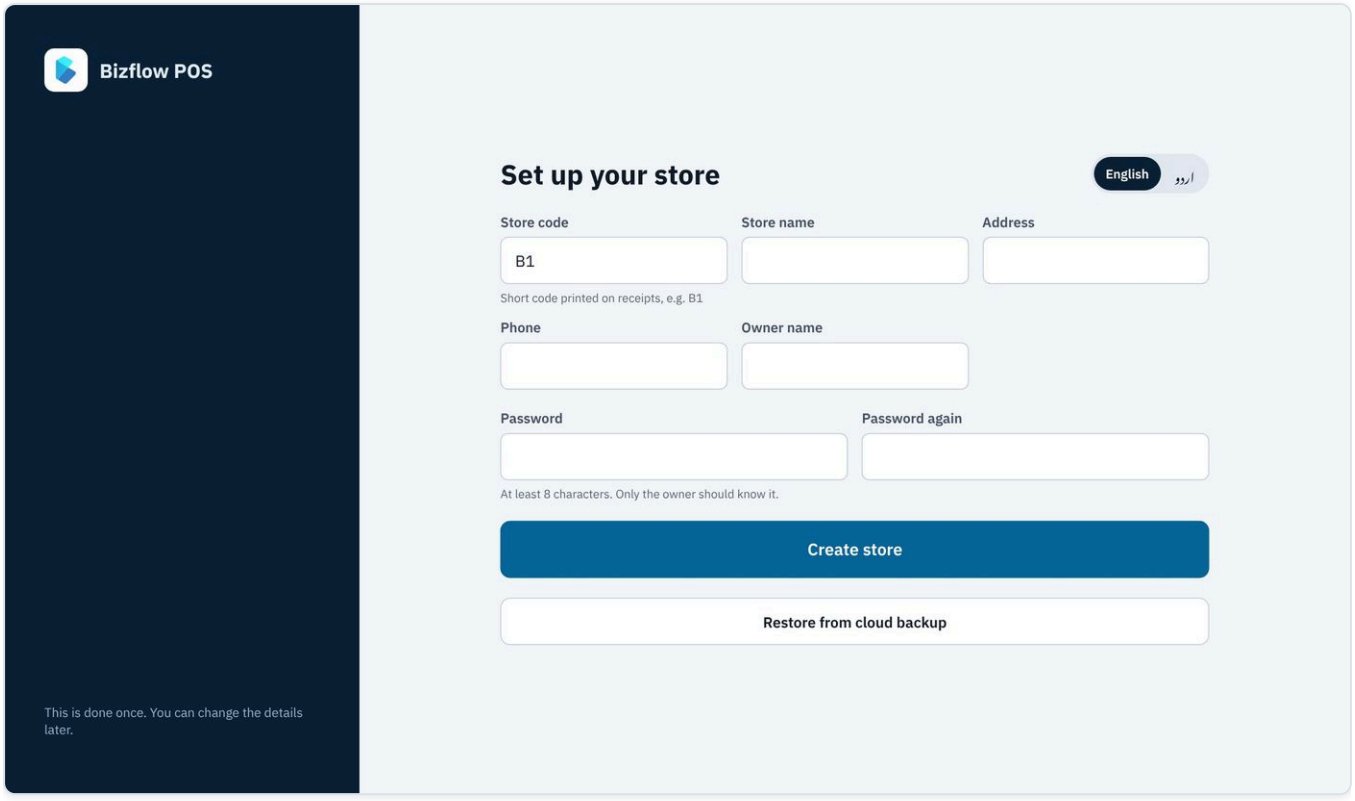

Figure 2 · Set up your store

Field	What to enter
Store code	A short code for this branch, e.g. `B1`. It appears in every receipt number and **cannot be changed later**. Use a different code for each branch.
Store name	The name printed at the top of receipts, e.g. *Bizflow Pharmacy*.
Address, Phone	Printed under the name on receipts.
Owner name	The name shown on the sign-in screen for the owner login.
Password / Password again	At least 8 characters. Only the owner should know it. It opens the Backoffice.
Create store	Creates the store database and signs you in.
Restore from cloud backup	Use this instead when you are replacing a main PC and the store had cloud backup turned on. Paste the database URL and token; everything comes back. See Cloud backup.

> **TIP**
> NTN, drug licence number and receipt messages are added later in Store details.

2.4 Checklist before the first sale

1. Fill in **Store details** (NTN, drug licence, receipt footer and returns policy).
2. Add your cashiers in **Users & access** and give each a PIN.
3. Load your products: one by one (Add product) or all at once from Excel (Import from Excel).
4. Connect the receipt printer on each till (Printer setup) and print a test receipt.
5. Make an **owner recovery code** and keep it somewhere safe.
6. Optional: turn on **cloud backup**.

CHAPTER 3

Signing in

3.1 Cashier sign-in with PIN

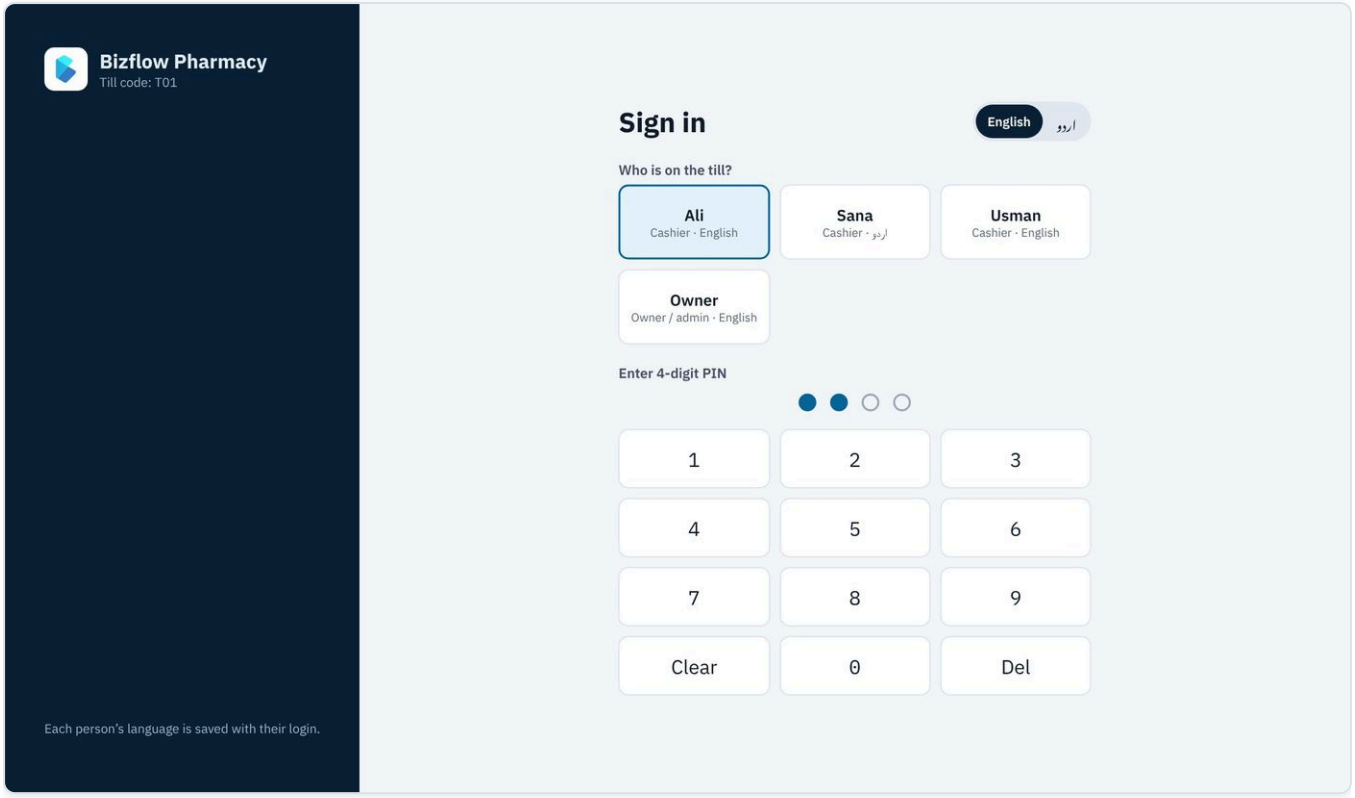

Figure 3 · Sign in — cashier PIN

Item	What it does
Who is on the till?	Tap your name. The **All** tile lists everyone; each tile shows the person's role and language.
PIN pad	Type your 4-digit PIN with the mouse, touch screen or keyboard number keys. **Clear** empties it, **Del** removes the last digit. You are signed in as soon as the 4th digit is typed.
English / اردو	Language for the sign-in screen. After sign-in the app switches to **your own** saved language.

WRONG PINS

After several wrong tries the login is locked for a short time. This stops anyone from guessing PINs.

3.2 Owner sign-in with password

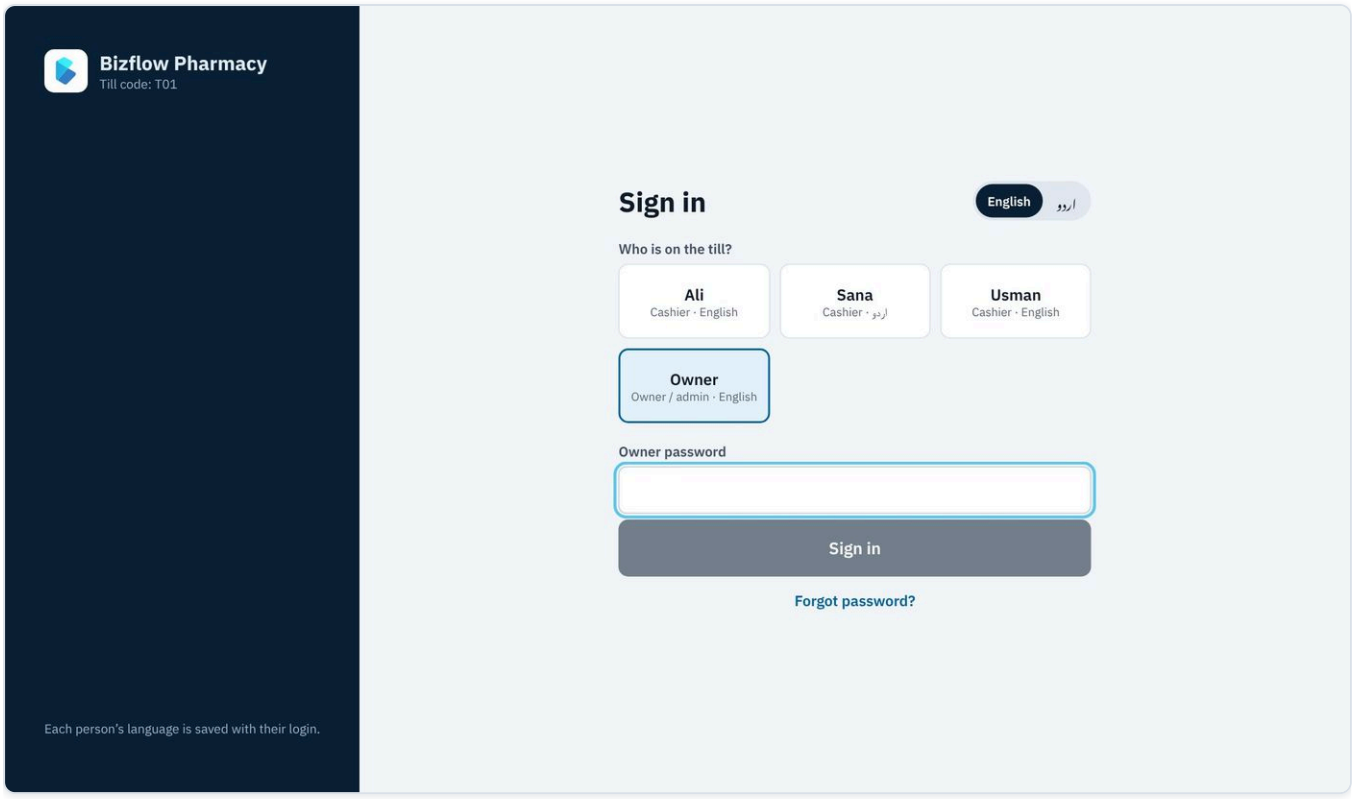

Figure 4 · Sign in — owner password

Tap the owner tile, type the password and press `Enter` or **Sign in**. The owner goes straight to the Backoffice.

Forgot password? works on the main PC only: type the recovery code you printed from Owner recovery code and choose a new password.

CHAPTER 4

The till — selling

4.1 Starting a shift

When a cashier signs in and has no open shift on this till, the app asks for the opening cash.

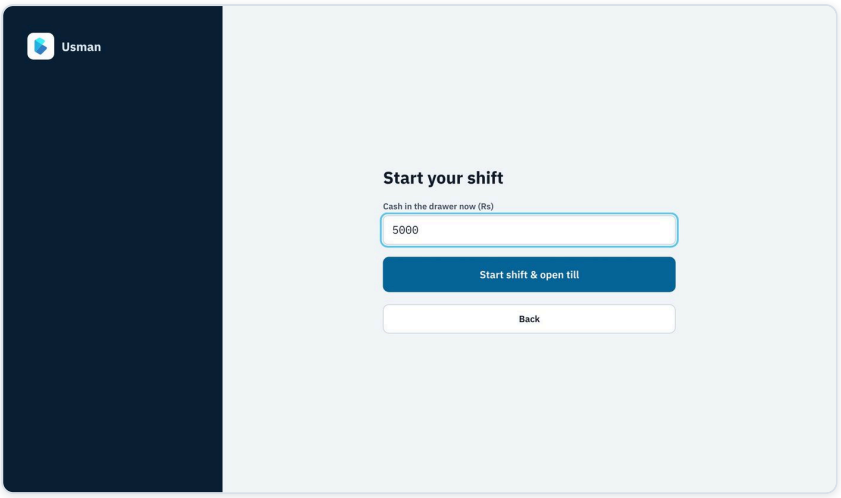

Figure 5 · Start your shift

Cash in the drawer now (Rs)	Count the float in the drawer and type it, e.g. `5000`. This is the starting figure for the closing count.
Start shift & open till	Opens the shift and shows the till. A sale cannot be made without an open shift.
Back	Return to sign-in without opening a shift.

4.2 The till screen at a glance

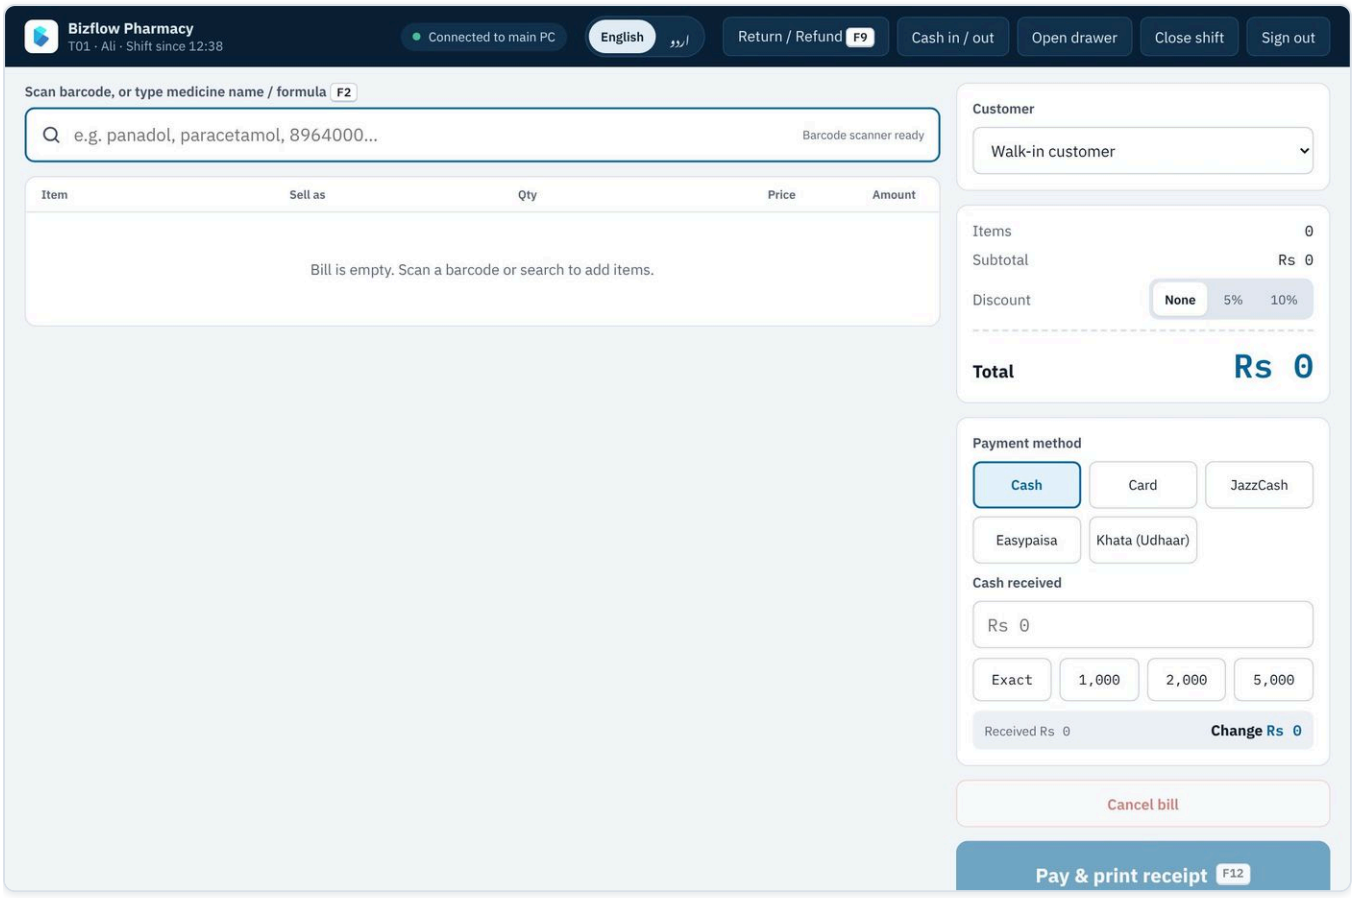

Figure 6 · The till, ready for a new bill

The screen has three parts: the **top bar**, the **bill** on the left and the **payment panel** on the right.

Top bar item	What it does
Store name · till · cashier · shift time	Shows where you are and since when the shift is open.
Connection badge	**Connected to main PC** means sales are being saved. A yellow badge means the main PC can't be reached (see Selling when the main PC is unreachable).
English / اردو	Switches the till language for this cashier. The choice is remembered.
Return / Refund F9	Opens the returns screen.
Cash in / out	Records cash put into or taken out of the drawer (not sales).
Open drawer	Opens the cash drawer without a sale. Usually needs a manager PIN; every opening is logged.
Close shift	Starts the end-of-shift cash count and Z-report.
Activity & rules, **Printer**	Shown to the owner/admin only: the activity log and this till's printer setup.
Sign out	Signs the cashier out. The shift stays open so the next sign-in continues it.

4.3 Finding and adding items

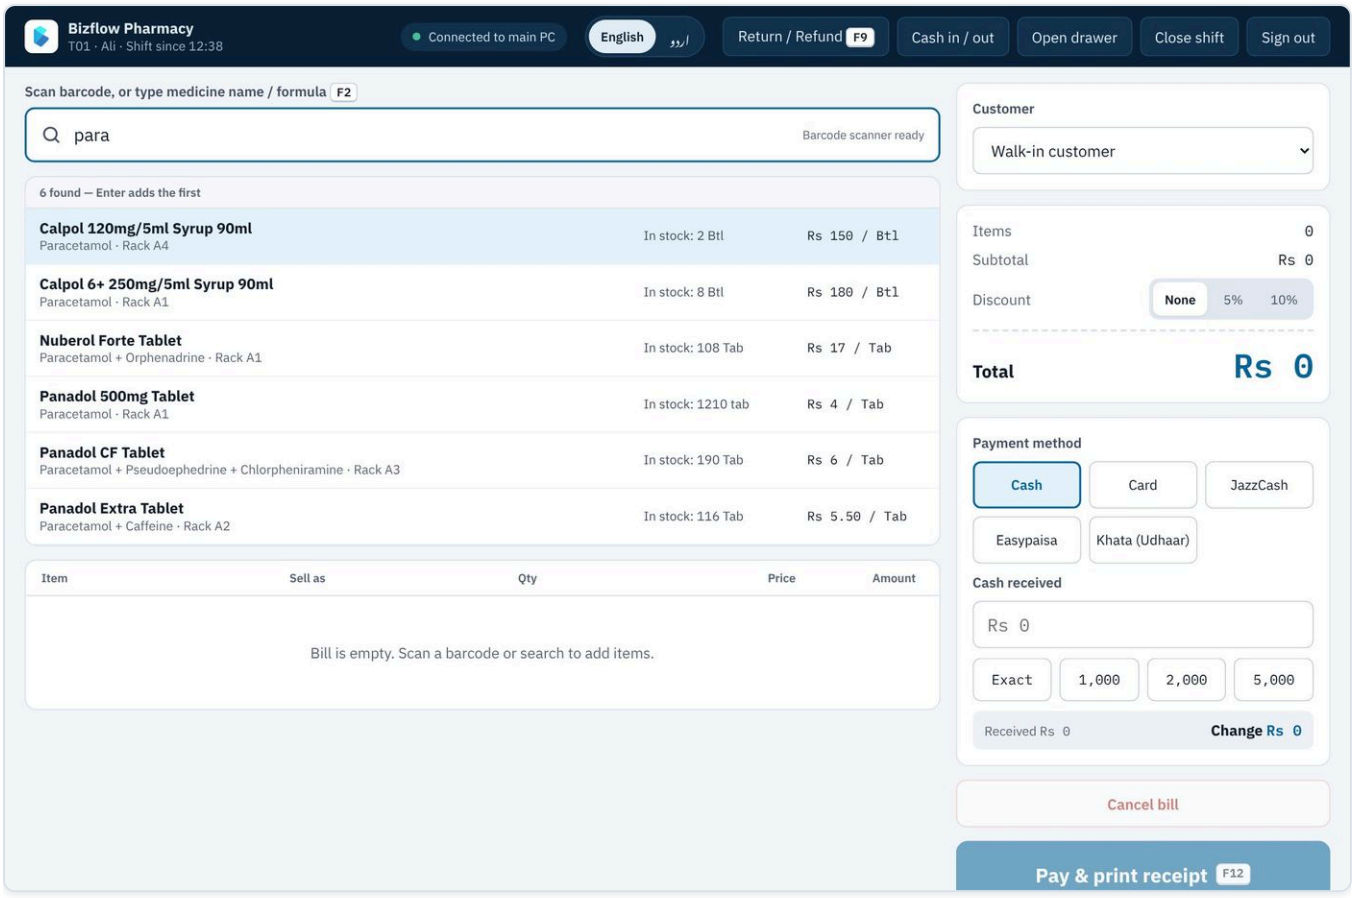

Figure 7 · Searching “para” shows every match by name, formula or company

- **Scan** the barcode with the scanner. The item is added at once, in the pack the barcode belongs to (e.g. a box barcode adds one box).
- **Type** part of the brand name, the formula (e.g. *paracetamol*) or the company. Every word must match, so *pan 500* finds *Panadol 500mg*.
- Press `Enter` to add the first result, use `↑` `↓` to pick another one, or click it.
- Each result shows the stock on hand and the price of each pack.
- `F2` jumps back to the search box from anywhere; `Esc` clears the search.

4.4 The bill

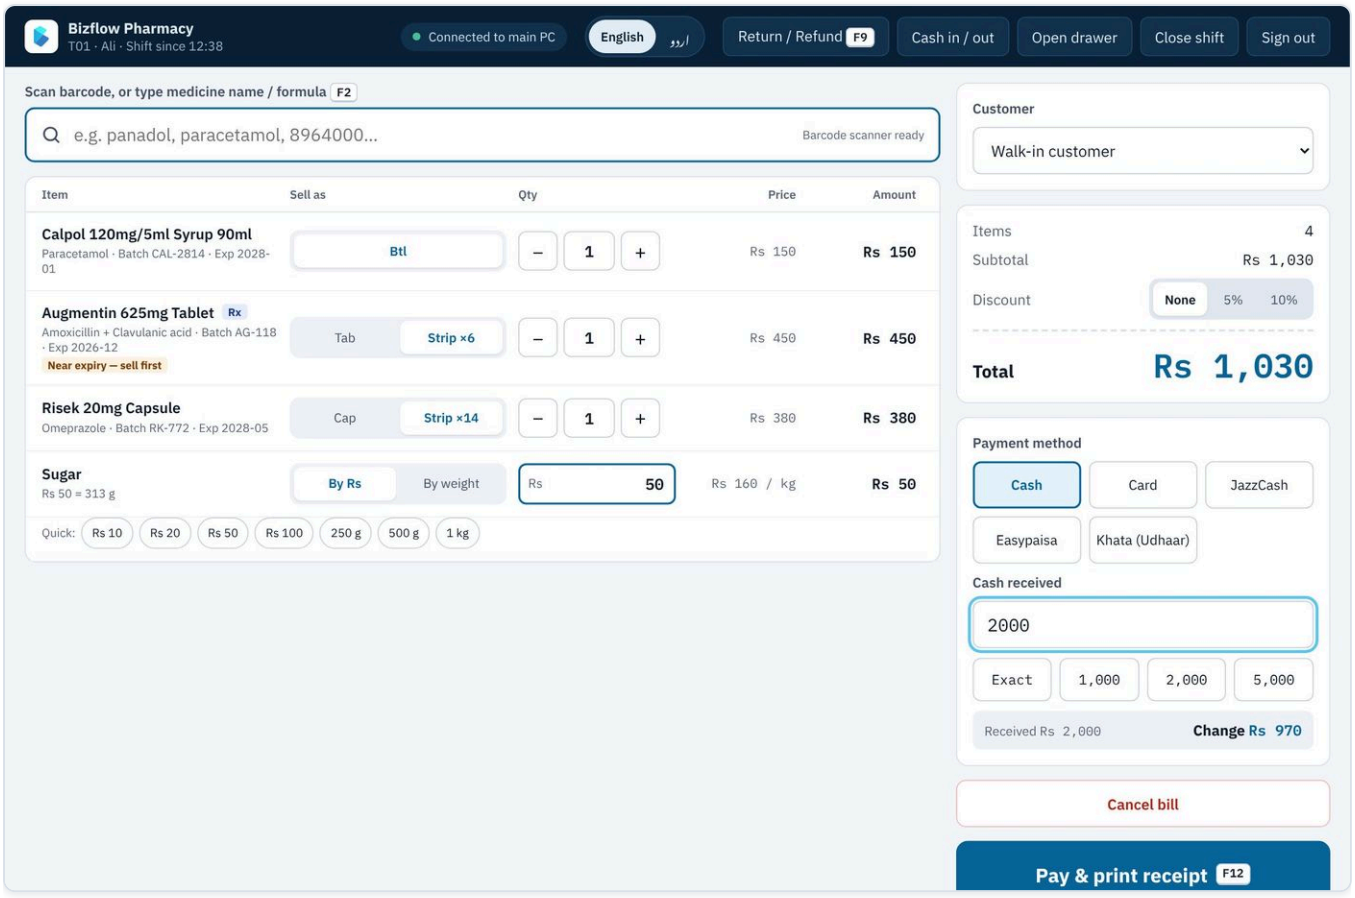

Figure 8 · A bill with a syrup, tablets sold by strip, capsules and sugar sold by rupees

Column / control	What it means
Item	Product name, formula, the batch being sold and its expiry. Badges: Rx prescription required; Near expiry — sell first ; Only N in stock when you ask for more than there is.
Sell as	Which pack to sell: e.g. Tab or Strip ×6. Only packs ticked “Sell?” on the product appear. The price changes to that pack’s price.
Qty with – +	How many of that pack. Type a number or use the buttons. Scanning the same barcode again adds one more.
Weight items: By Rs / By weight	For loose items such as sugar or rice. **By Rs**: type the rupee amount the customer wants (Rs 50 = 313 g). **By weight**: type grams. The quick buttons (Rs 10 … 1 kg) fill common amounts.
Price / Amount	Price of one pack and the line total.

BATCHES AND EXPIRY

You never choose a batch at the till. Bizflow sells from the batch with the earliest expiry first, and moves on to the next batch automatically when one runs out. Expired batches are never sold.

REMOVING A LINE

Click the remove (bin) button at the end of the line. If the rule *Remove a scanned item* is on, a manager PIN is needed.

4.5 Customer, discount and payment

Field	What to do
Customer	Walk-in customer for normal sales. Choose a named customer to print their name on the receipt, or to sell on khata. + New customer adds one on the spot (name and phone).
Items / Subtotal	Number of lines and the total before discount.
Discount	None , 5% or 10% on the whole bill. A discount above the store's limit (5% by default) needs a manager PIN.
Total	What the customer pays. Prices already include sales tax.
Payment method	Cash , Card , JazzCash , Easypaisa or Khata (Udhaar) .
Cash received	Cash only. Type what the customer handed over, or tap Exact , 1,000 , 2,000 , 5,000 . The **Change** to give back is shown in large figures.
Cancel bill	Empties the bill. Needs a manager PIN if the rule is on. Logged in the activity log.
Pay & print receipt F12	Saves the sale, takes the stock off the shelf, opens the cash drawer (cash sales) and prints the receipt.

4.6 Manager approval

When a cashier does something the store rules don't allow alone, a box asks for approval. Nothing is saved until someone approves.

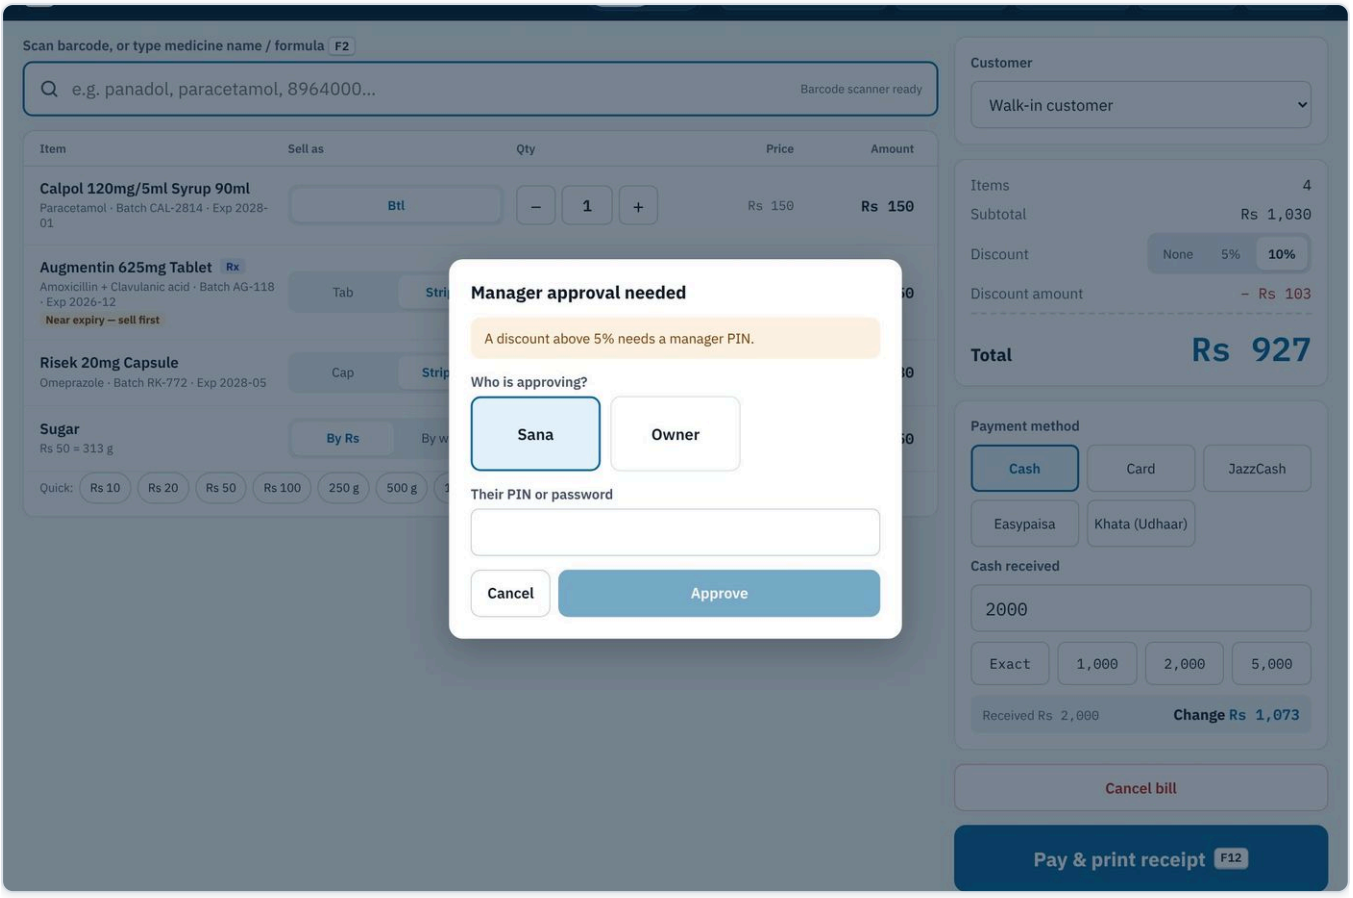

Figure 9 · A 10% discount needs a manager PIN

1. The box says why approval is needed (e.g. *A discount above 5% needs a manager PIN*).
2. The approver taps their name under **Who is approving?**. Only the owner and cashiers marked *Can approve* are listed.
3. They type their PIN (or the owner types the password) and press **Approve**.

Every approval is written in the activity log with both names. Several wrong PINs lock that approver for a while.

The owner sets which actions need approval in Needs a manager PIN.

4.7 Sale saved and the receipt

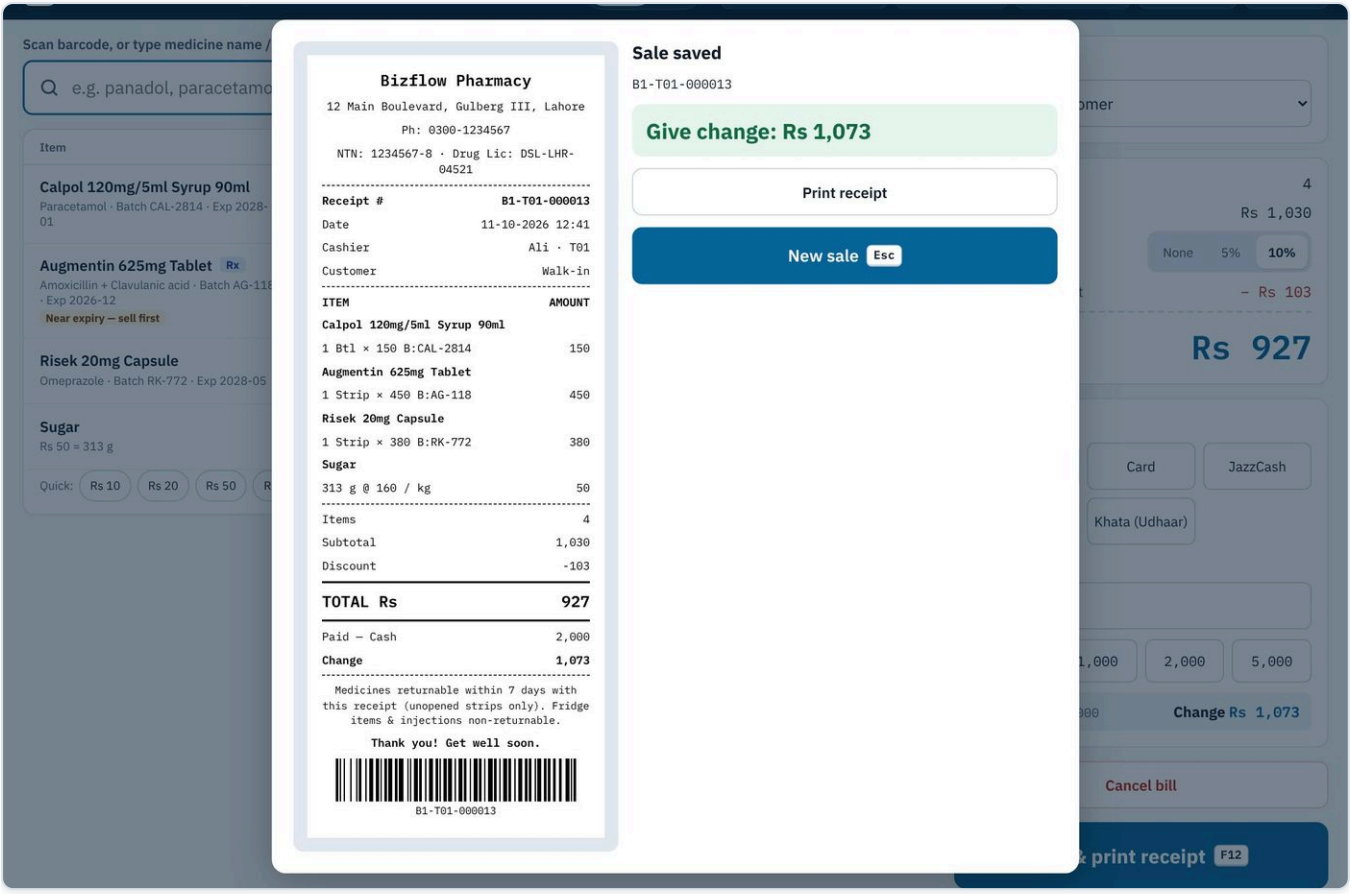

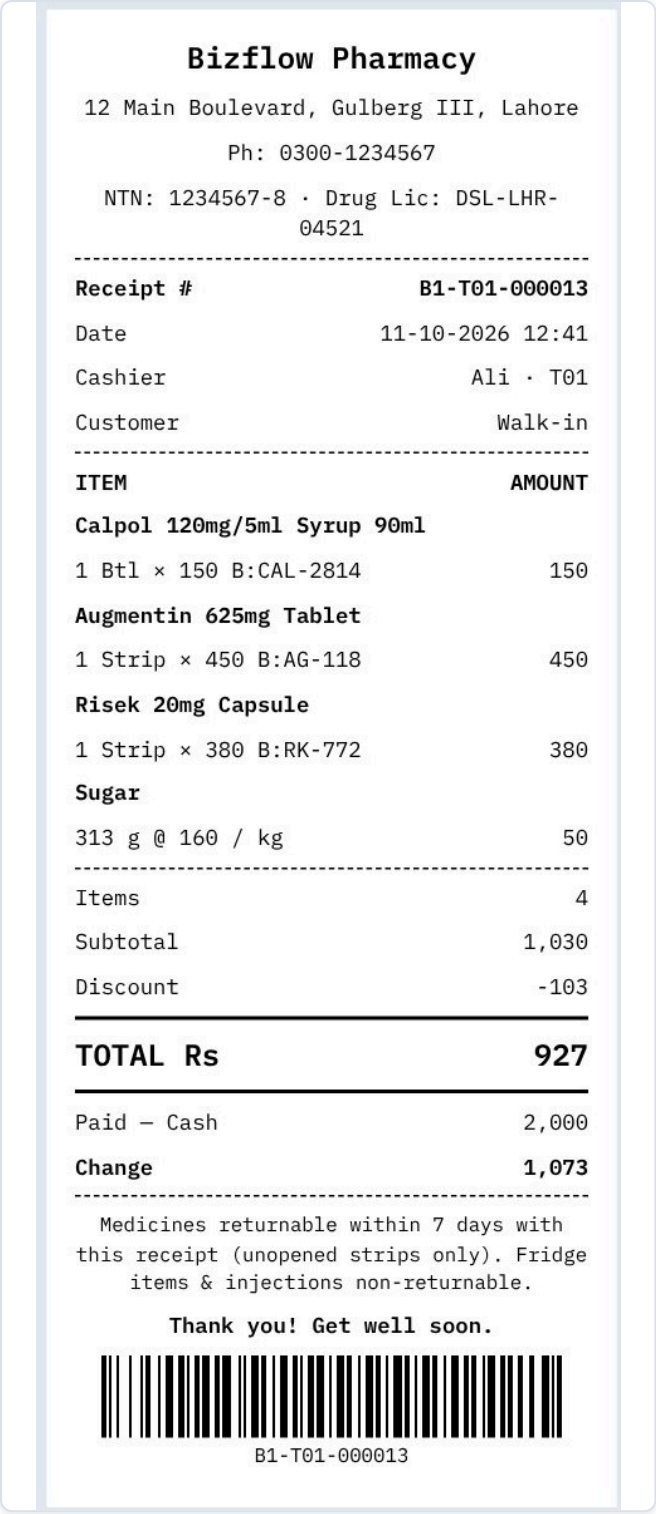

Figure 10 · Sale saved — receipt preview and change to give

Receipt number	e.g. `B1-T01-000013` = store B1, till T01, bill number 13.
Give change	The change to hand back, in green.
Print receipt	Prints (another) copy.
New sale `Esc`	Clears the screen for the next customer. `F12` does the same.

Bizflow Pharmacy

12 Main Boulevard, Gulberg III, Lahore

Ph: 0300-1234567

NTN: 1234567-8 · Drug Lic: DSL-LHR-04521

Receipt #	**B1-T01-000013**
Date	11-10-2026 12:41
Cashier	Ali · T01
Customer	Walk-in

ITEM	**AMOUNT**
Calpol 120mg/5ml Syrup 90ml	
1 Btl × 150 B:CAL-2814	150
Augmentin 625mg Tablet	
1 Strip × 450 B:AG-118	450
Risek 20mg Capsule	
1 Strip × 380 B:RK-772	380
Sugar	
313 g @ 160 / kg	50

Items	4
Subtotal	1,030
Discount	-103
TOTAL Rs	**927**
Paid — Cash	2,000
Change	**1,073**

Medicines returnable within 7 days with this receipt (unopened strips only). Fridge items & injections non-returnable.

Thank you! Get well soon.

B1-T01-000013

Figure 11 · An 80 mm receipt

Parts of the receipt

1. **Header** — store name, address, phone, NTN and drug licence (from Store details).
2. **Bill details** — receipt number, date and time, cashier and till, customer.
3. **Lines** — product, quantity × price, batch number (`B:`) and amount. Weight items show grams and price per kg.
4. **Totals** — items, subtotal, discount, total, how it was paid and the change.
5. **Returns policy** — your own text, set in Store details. Leave it empty to print none.
6. **Footer** — your thank-you message.
7. **Barcode** — the receipt number as a barcode. Scan it on the returns screen to find the bill instantly.

Khata sales also print the customer's balance. When FBR reporting is on, the FBR invoice number and QR code are printed too.

A customer whose khata profile says *Urdu receipt* gets an Urdu receipt; everyone else gets the store's default receipt language.

4.8 Selling on khata (udhaar)

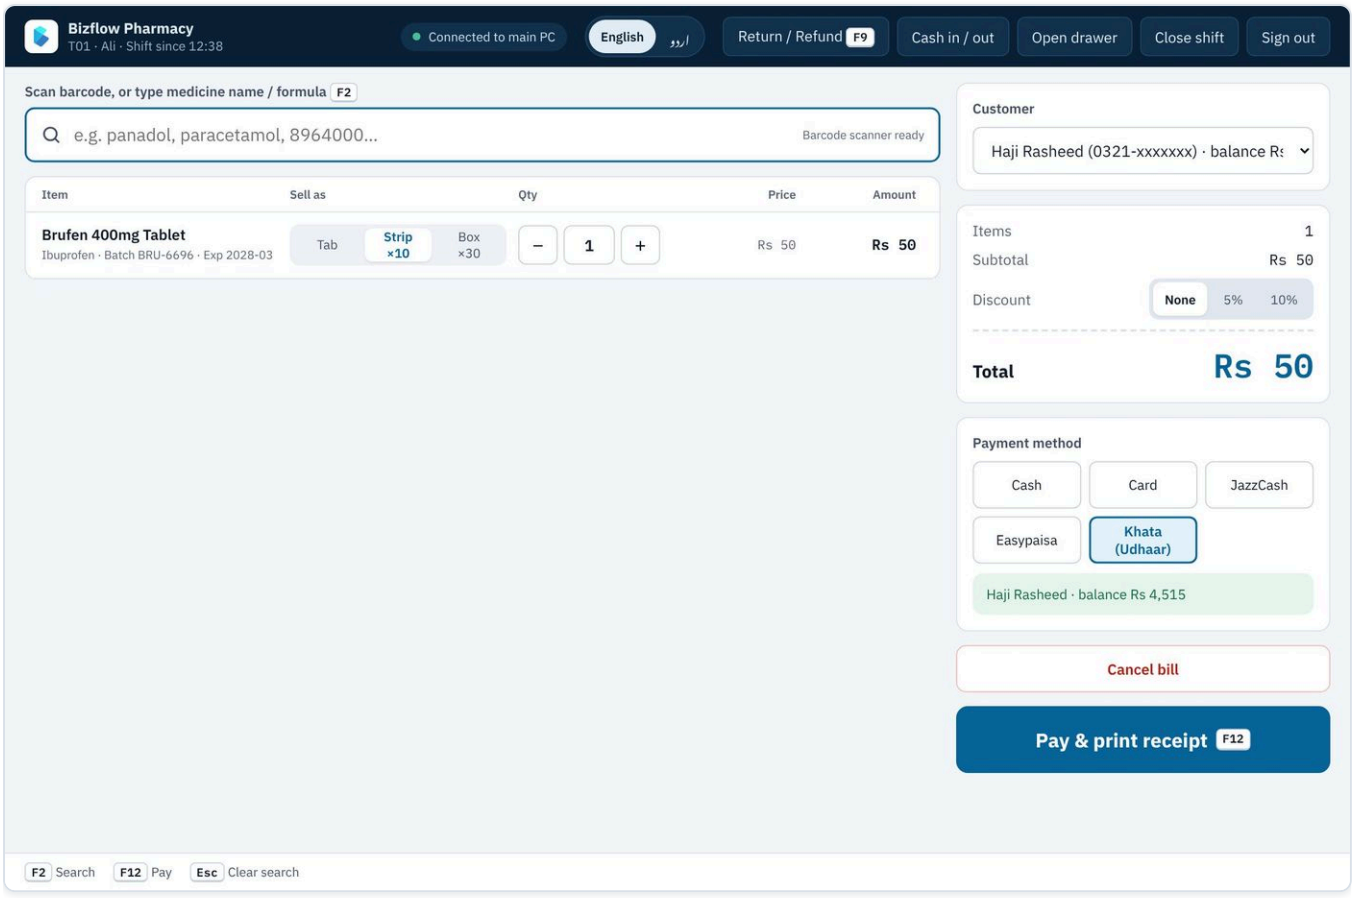

Figure 12 · A khata bill for Haji Rasheed, with his balance shown

1. Choose the customer in **Customer**. Their current balance is shown next to the name.
2. Choose **Khata (Udhaar)** as the payment method. The note under it confirms the bill will be added to their udhaar.
3. Press **Pay & print receipt**. If the bill would take them over their credit limit, a manager PIN is needed.

The bill appears at once in the customer's ledger under Customers & Khata.

4.9 Returns and refunds

Press F9 or Return / Refund.

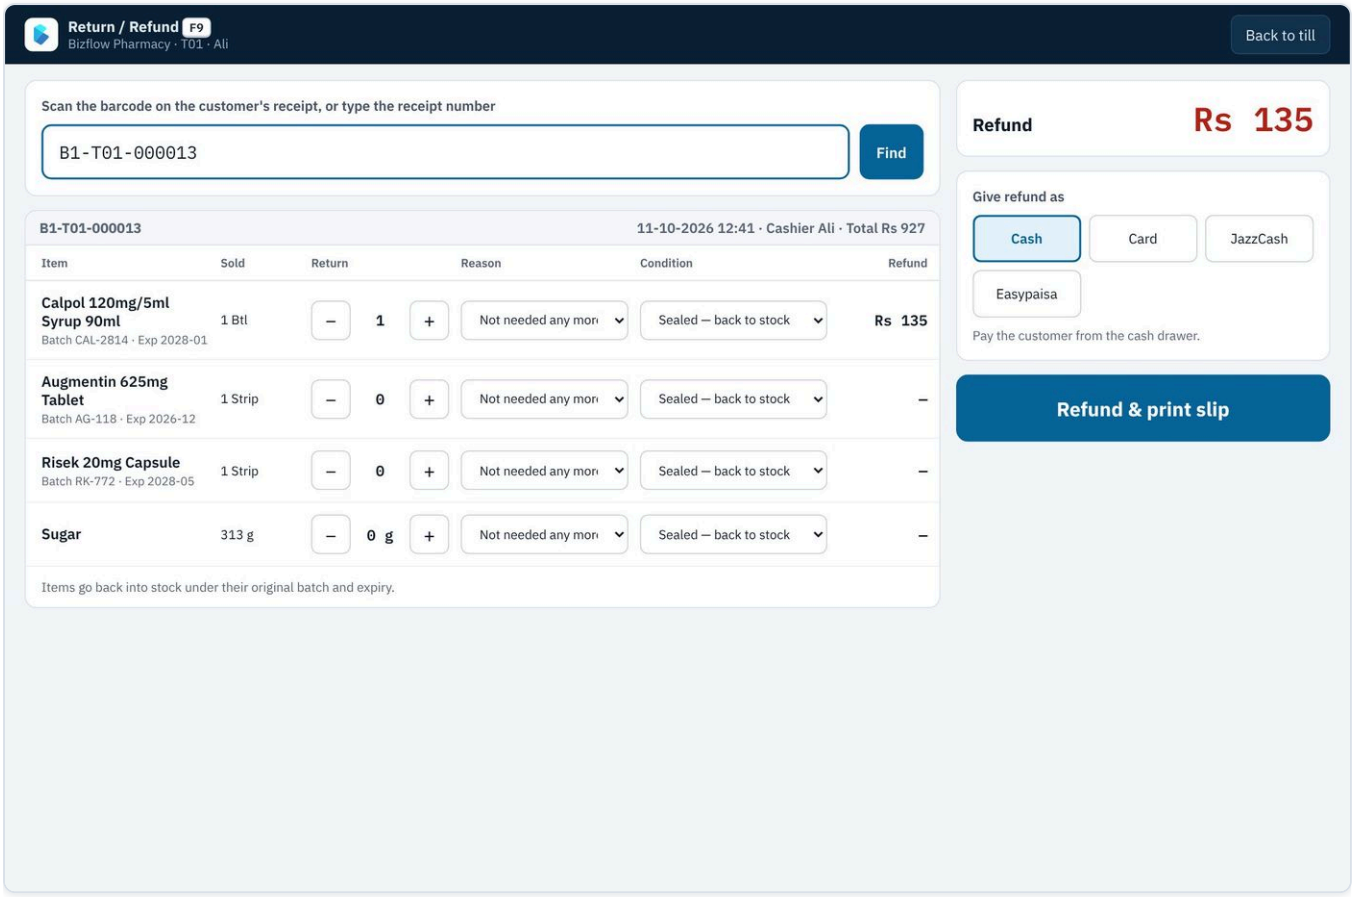

Figure 13 · Returns — the original bill is found by its receipt number

1. **Scan the barcode** printed on the customer's receipt, or type the receipt number, then Find. Offline receipts (X numbers) can be found the same way once they are synced.
2. The bill shows what was sold, what has already been returned and the batch of each line.
3. For each item coming back, set the **Return** quantity with – +. You can return part of a strip if it was sold by tablet.
4. Choose the **Reason**: Not needed any more, Wrong item given, Doctor changed medicine, Damaged pack.
5. Choose the **Condition**:
   - *Sealed — back to stock*: goes back on the shelf under its **original batch and expiry**.
   - *Damaged — write off*: not added back; recorded as a loss.
   - *Expired — return to supplier*: kept aside for the supplier, not sellable.
6. Choose **Give refund as**: cash, card, JazzCash, Easypaisa, or *Khata credit* (takes it off the customer's udhaar). Khata bills can only be refunded to khata.
7. Press Refund & print slip.

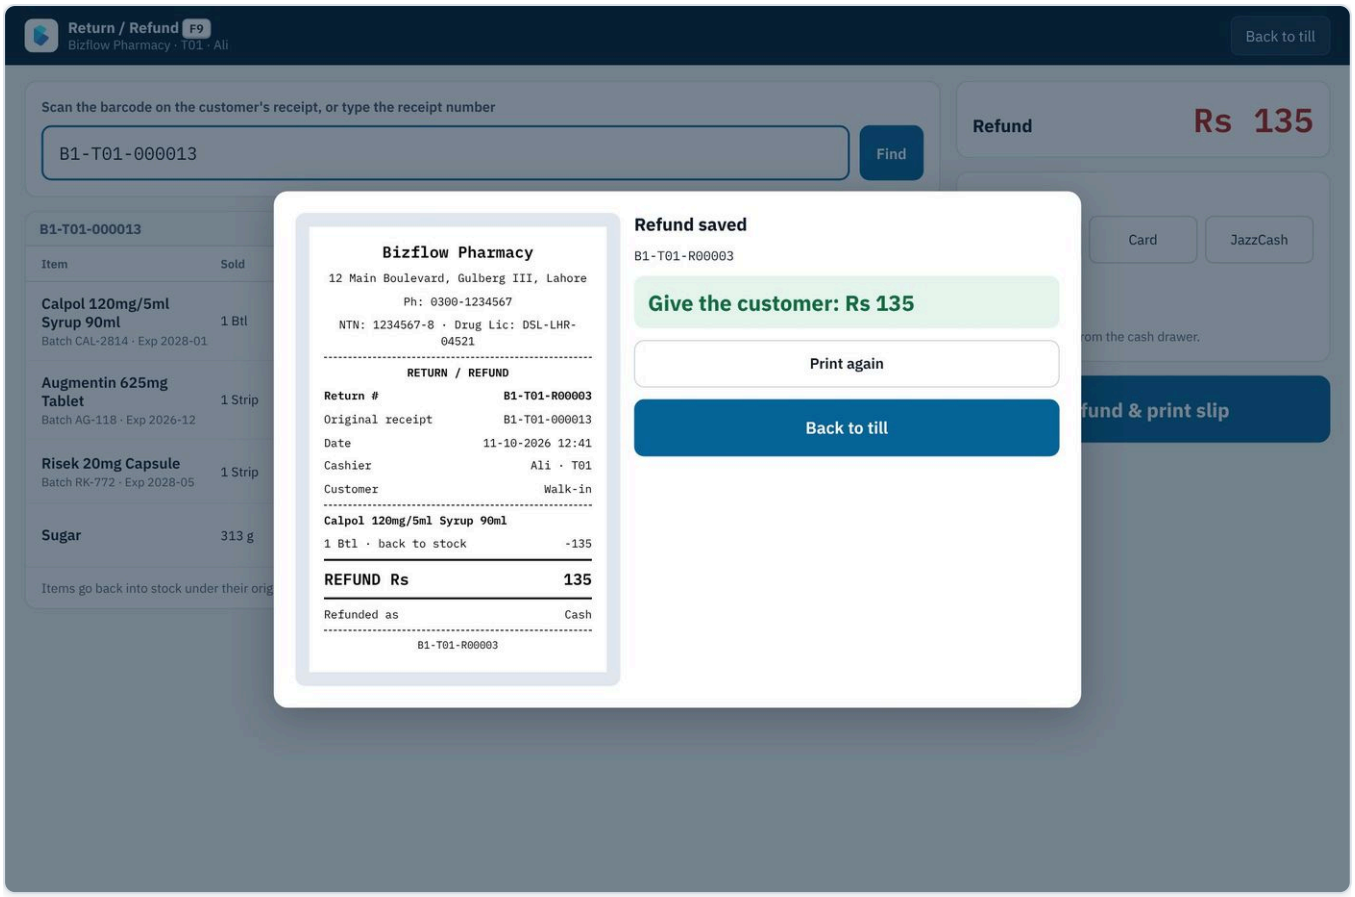

Figure 14 · Refund saved — give the customer the amount shown

RULES FOR RETURNS

Fridge items are marked *not returnable* and can't be returned. Refunds above the store limit (Rs 500 by default) need a manager PIN; several small refunds on the same bill are added together for this check. A cash refund can never be more than the cash in the drawer.

4.10 Cash in / out of the drawer

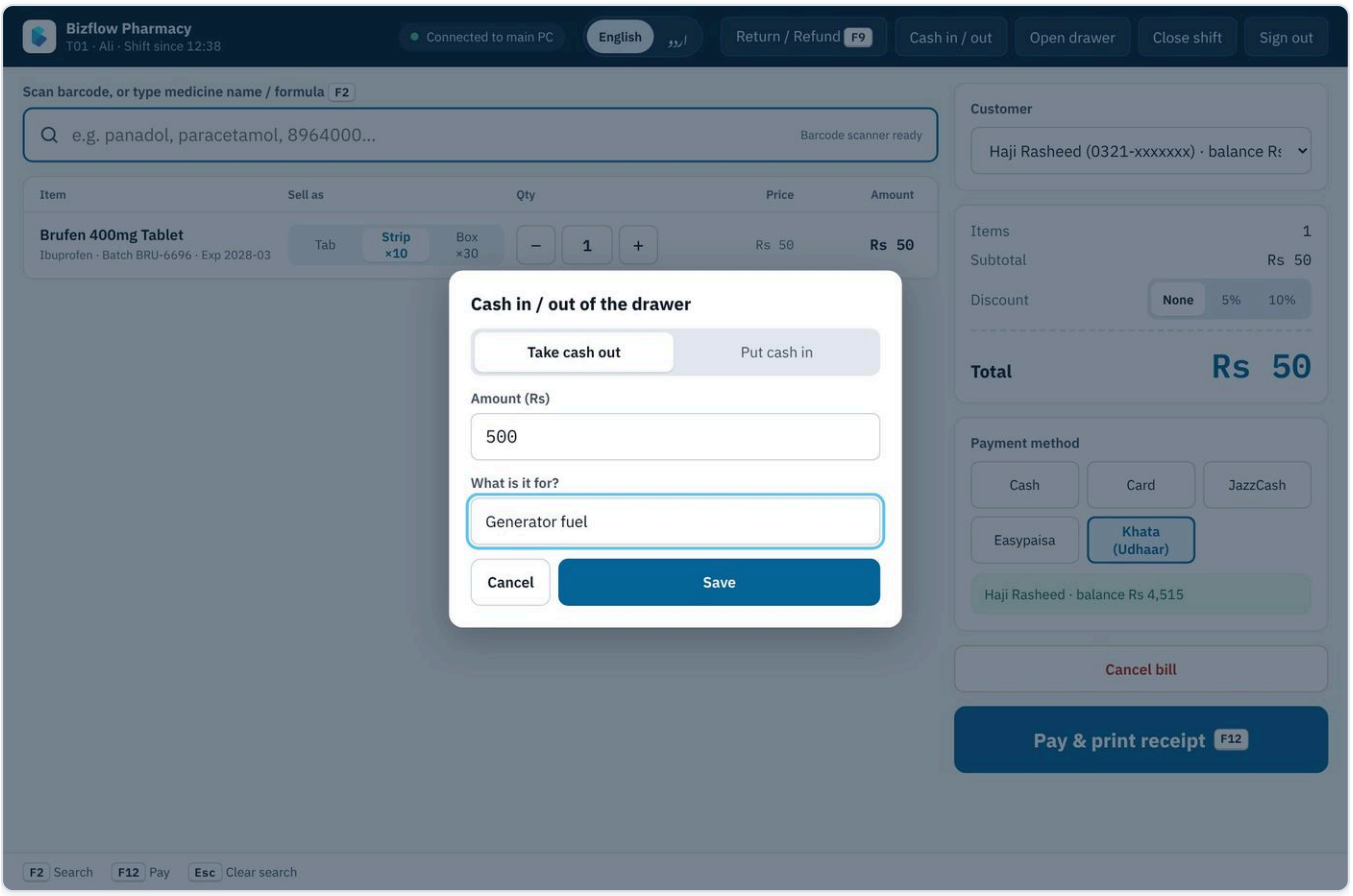

Figure 15 · Taking Rs 500 out for generator fuel

Take cash out / **Put cash in**	Choose the direction. Use *Put cash in* for change from the bank; *Take cash out* for small shop payments or handing cash to the owner.
Amount (Rs)	The amount moved.
What is it for?	A short reason, e.g. *Generator fuel*, *Tea for staff*. It appears in the activity log and Z-report.
Save	Records it and opens the drawer. Taking cash out can be set to need a manager PIN.

TIP

Shop expenses paid from the drawer can also be recorded in Expenses so they reduce profit in reports.

4.11 Printer setup

Each till has its own printer. The owner opens it with **Printer** in the till's top bar.

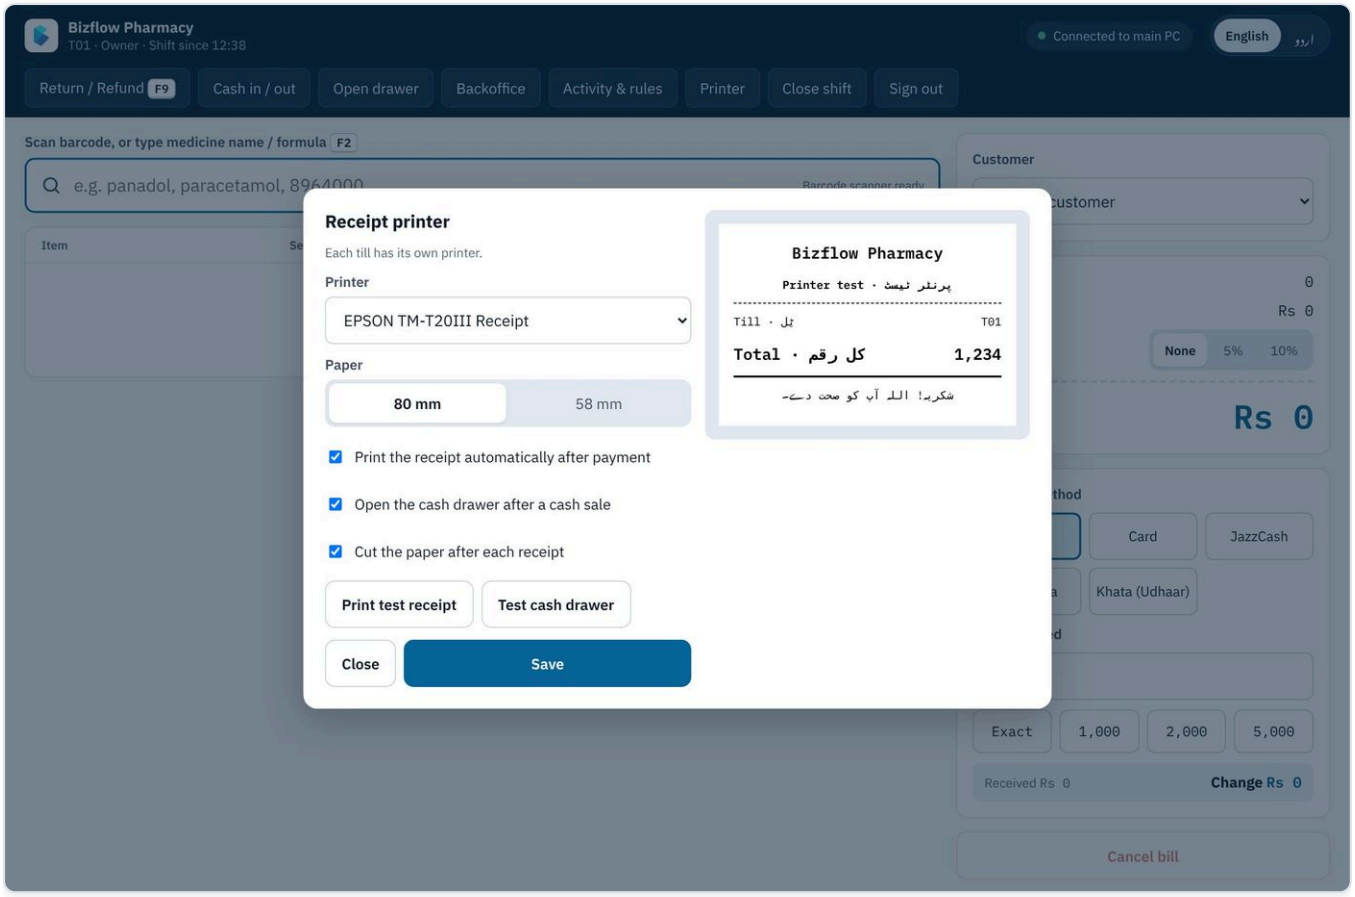

Figure 16 · Receipt printer settings with a live preview

Printer	Pick the thermal printer installed in Windows (e.g. EPSON TM-T20III, BlackCopper). *Use the print dialog* shows Windows' print box instead.
Paper	**80 mm** (standard) or **58 mm**. The preview on the right changes to match.
Print the receipt automatically after payment	Prints without asking every time a sale is saved.
Open the cash drawer after a cash sale	Kicks the drawer connected to the printer.
Cut the paper after each receipt	For printers with an auto-cutter.
Print test receipt / **Test cash drawer**	Check the setup before saving.
Save	Saves the settings for this till.

4.12 Working in Urdu

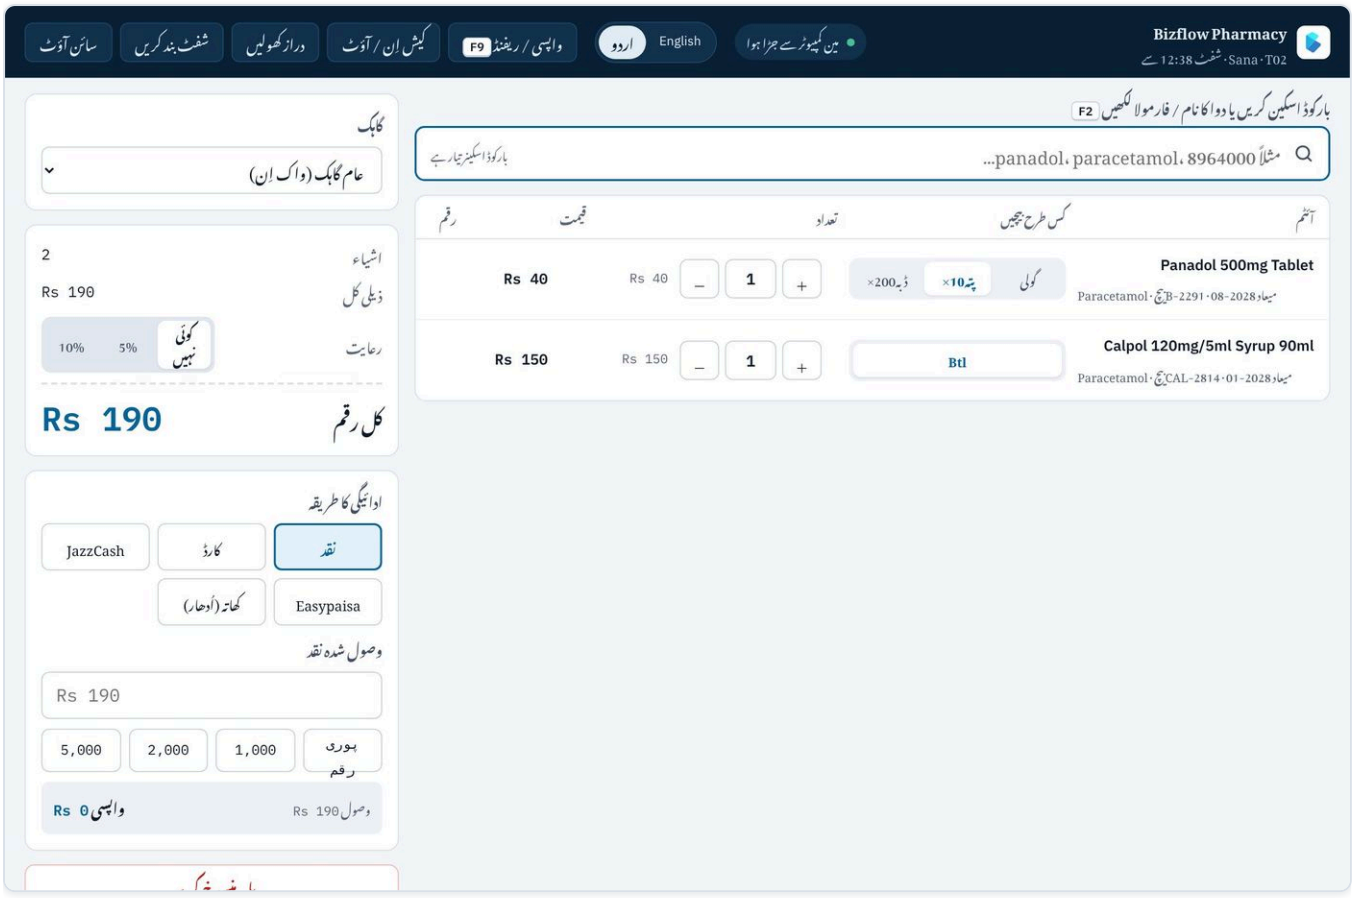

Figure 17 · The same till in Urdu, laid out right-to-left

Tap **اردو** in the top bar. The whole screen turns right-to-left, with all labels in Urdu. Product names stay as printed on the pack, and numbers and receipt numbers stay in English digits so they are easy to match. Each cashier's language is saved with their login.

4.13 Selling when the main PC is unreachable

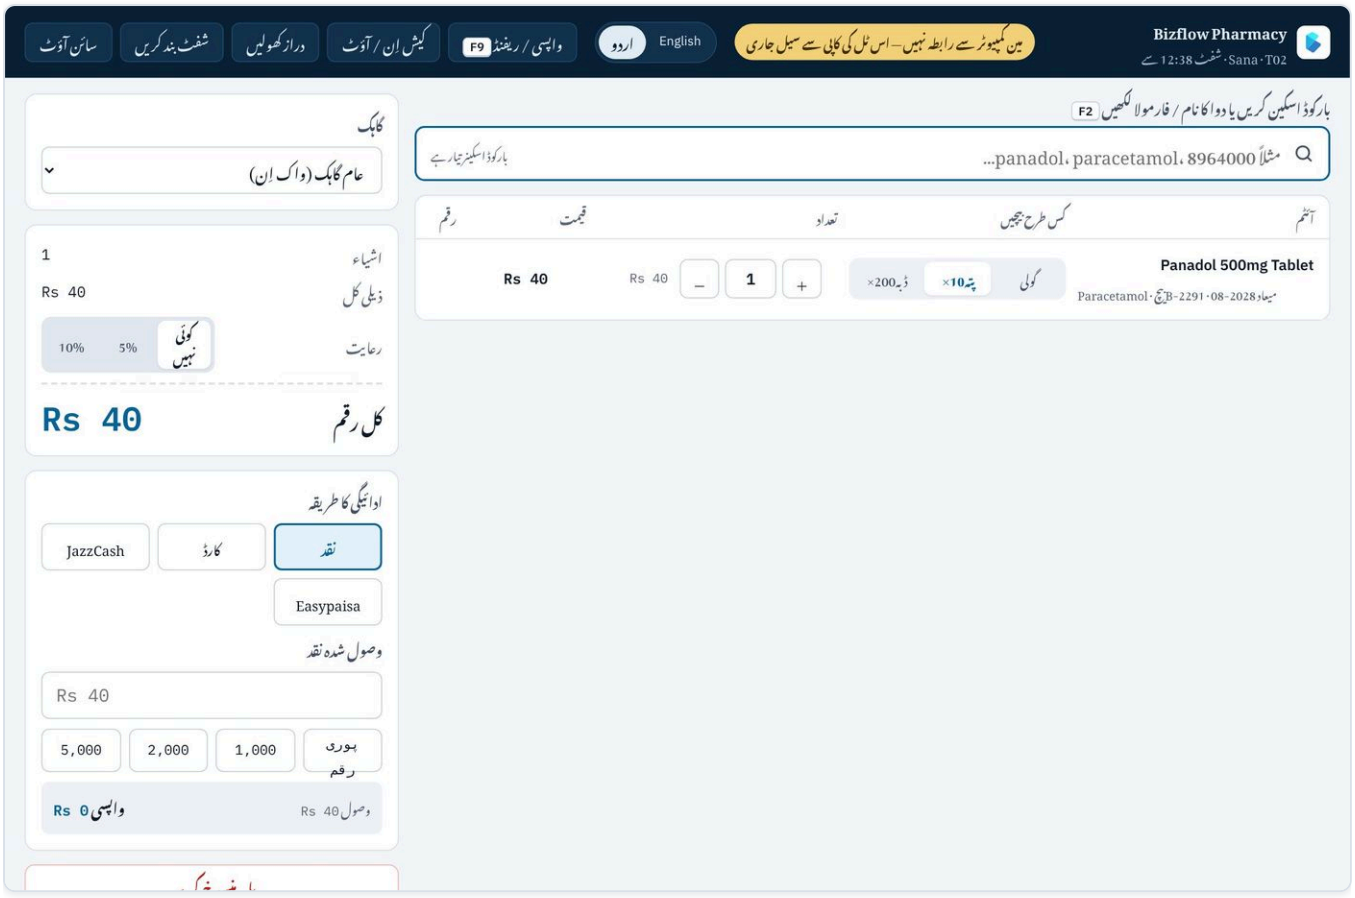

Figure 18 · An extra till selling from its own copy while the main PC is off

If the network or the main PC goes down, an **extra till** keeps selling from its own copy of the product list. A yellow badge shows *Main PC not reachable — selling from this till's copy*.

- Receipts get their own number series with an **X**, e.g. `B1-T02-X000001`.
- Payment by cash, card, JazzCash or Easypaisa. Khata, returns and cash moves wait until the main PC is back.
- Prices come from the copy the till downloaded last. The main PC checks every offline sale against that price list when it arrives.
- When the main PC answers again, the waiting sales are sent automatically and the badge turns green. Stock is taken off then.
- If the main PC refuses a sale (for example a price that was never on the list), it is kept and shown to the owner, so nothing is lost.

> **IMPORTANT**
> Don't close or reinstall an extra till while it still has offline sales waiting. The till warns you if it cannot store them safely.

4.14 Closing the shift

At the end of the shift press **Close shift**.

1. Count the cash

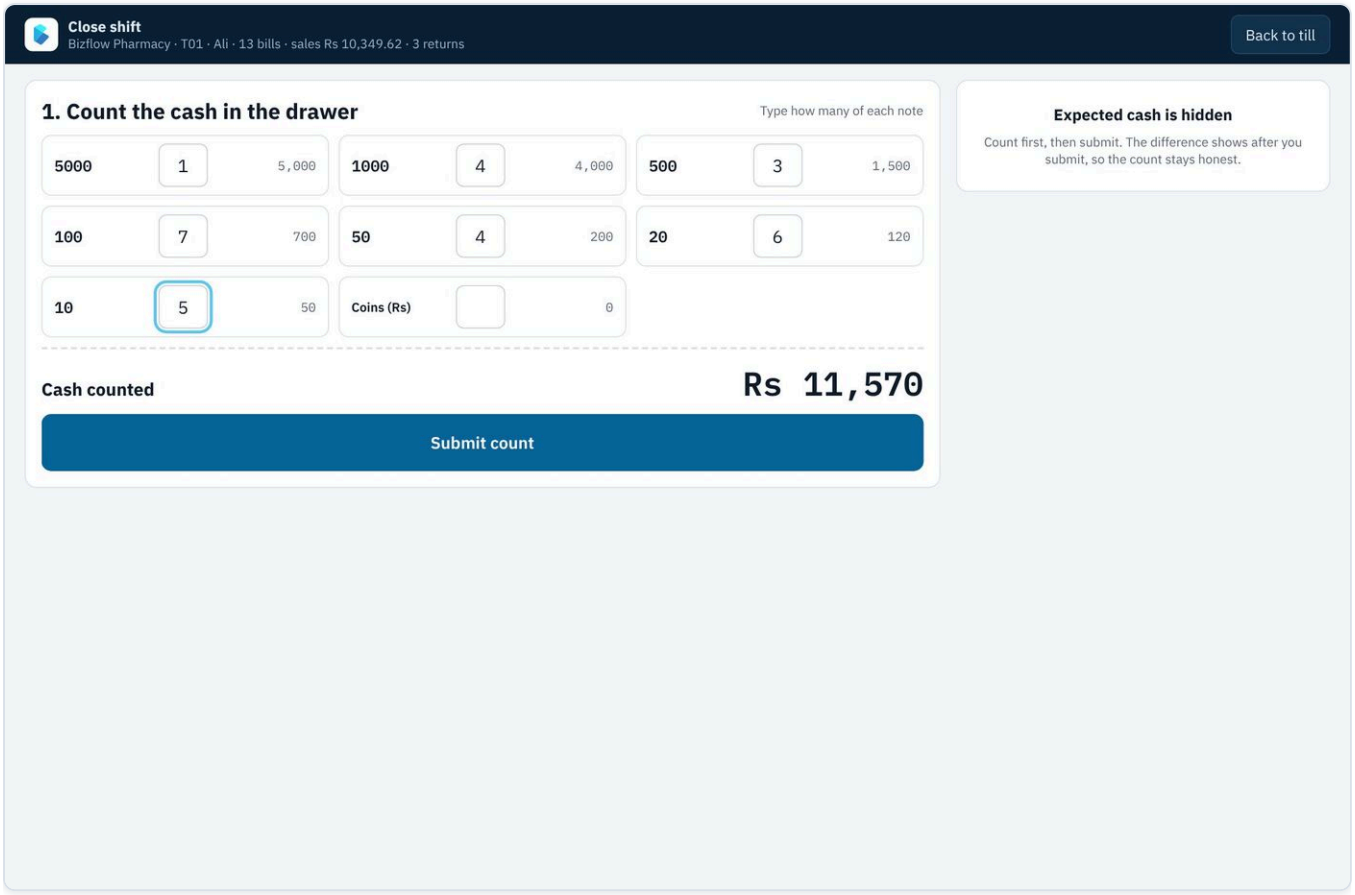

Figure 19 · Count each note; the expected amount stays hidden

Type **how many** of each note are in the drawer (5000, 1000, 500, 100, 50, 20, 10) and the total of the coins in rupees. **Cash counted** adds them up. For cashiers the expected cash is **hidden** until the count is submitted, so the count stays honest. Press **Submit count**.

2. Compare with expected cash

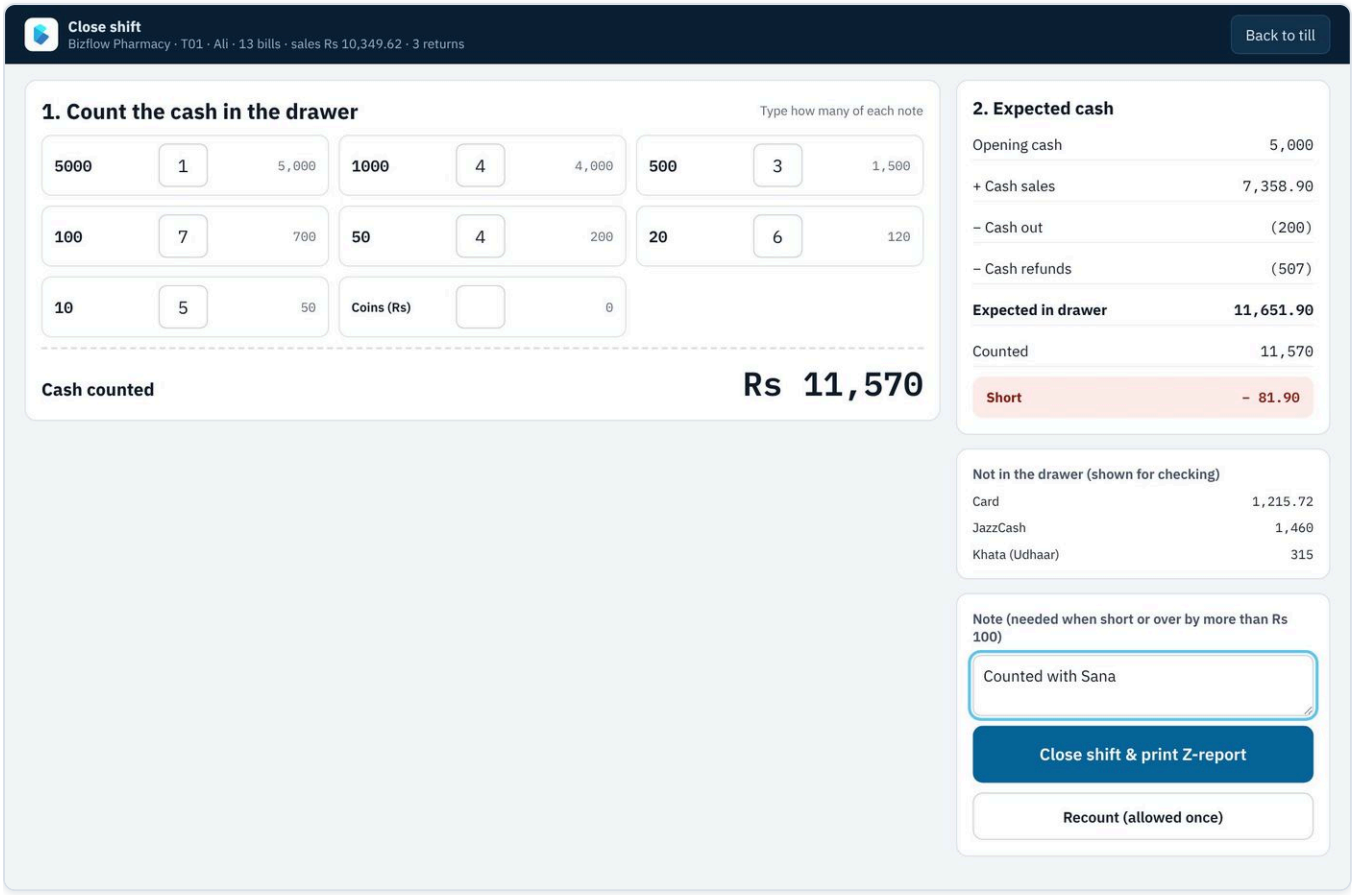

Figure 20 · Expected vs counted, with the difference

Opening cash	What was in the drawer when the shift started.
+ Cash sales, + Cash in	Cash that came in during the shift.
– Cash out, – Cash refunds	Cash that left the drawer.
Expected in drawer	What should be there.
Counted / Short / Over	What you counted, and the difference (red if short).
Not in the drawer	Card, JazzCash, Easypaisa and khata totals, for checking against the machine and phone.
Note	Required when short or over by more than Rs 100. Explain the difference.
Recount (allowed once)	Count again if you think you made a mistake. Allowed one time.
Close shift & print Z-report	Closes the shift and prints the Z-report.

3. Z-report

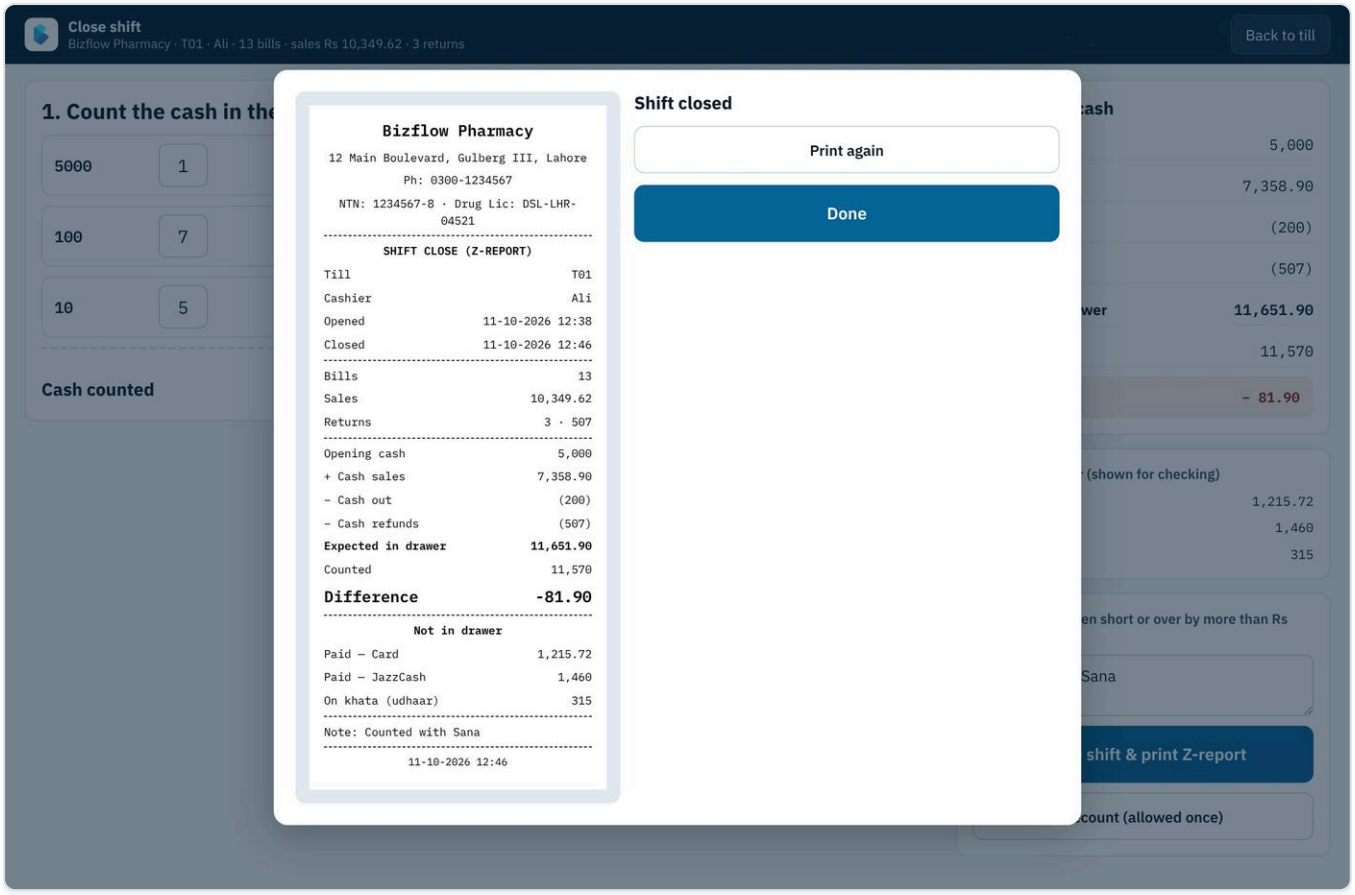

Figure 21 · Shift closed — the Z-report

The Z-report is the printed summary of the shift: bills, sales, returns, every cash figure, the difference and the note. Keep it with the cash. **Print again** prints another copy; **Done** returns to sign-in. All Z-reports can be seen later in Financial reports → Shift closes.

4.15 Keyboard shortcuts

Key	What it does
`F2`	Go to the search box.
`Enter`	In search: add the first (or highlighted) result.
`↑` `↓`	Move through search results.
`F12`	Pay & print receipt. After a sale: start a new sale.
`F9`	Open Return / Refund.
`Esc`	Clear the search. After a sale: start a new sale.

CHAPTER 5

The Backoffice

The Backoffice is where the owner manages stock, purchases, money and settings. The owner lands here after signing in.

5.1 Moving around

The dark menu on the left is always visible.

Menu item	What you find there
Dashboard	Today's figures, sales chart, low stock and expiring items.
Financial reports	22 reports on sales, profit, stock, purchases, khata and tax.
Inventory	Products, stock and batches; stock counts; branch transfers; Excel import.
Purchases & Suppliers	Receiving stock (GRN), purchase history, supplier balances.
Expenses	Rent, electricity, salaries and other shop costs.
Customers & Khata	Customer credit accounts and payments.
Approvals & Activity log	Everything that happened, and the manager-PIN rules.
All stores	Figures of all your branches side by side.
Store, Users & Settings	Store details, receipt text, users, backups, FBR.

At the bottom: the **cloud backup status** (click it to open settings), Open the till to sell from this computer, the language switch, and Sign out.

5.2 Dashboard

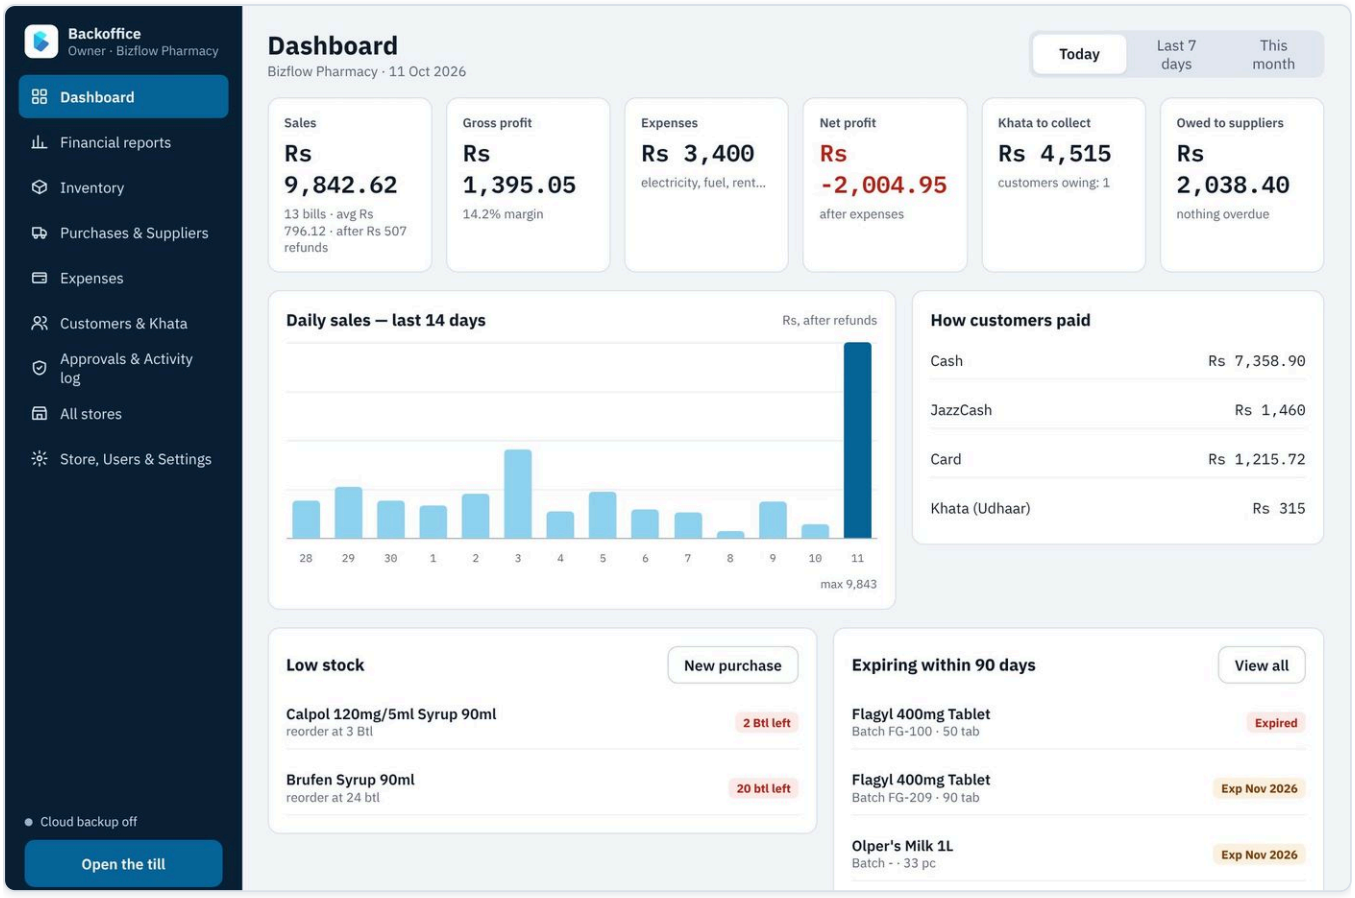

Figure 22 · Dashboard

Card	What it shows
Today / Last 7 days / This month	The period for the figure cards.
Sales	Sales after refunds, number of bills and the average bill.
Gross profit	Sales minus the cost of the stock sold, and the margin %.
Expenses	Shop expenses recorded for the period.
Net profit	Gross profit minus expenses. Shown in red when negative (e.g. a day when rent was paid).
Khata to collect	Total udhaar customers owe you now, and how many customers.
Owed to suppliers	What you owe distributors, and whether any of it is overdue.
Daily sales — last 14 days	A bar per day; today is the dark bar.
How customers paid	The split between cash, card, JazzCash, Easypaisa and khata.
Low stock	Items below their reorder level. New purchase opens a GRN.
Expiring within 90 days	Batches expiring soon or already expired. View all opens the list in Inventory.

5.3 Financial reports

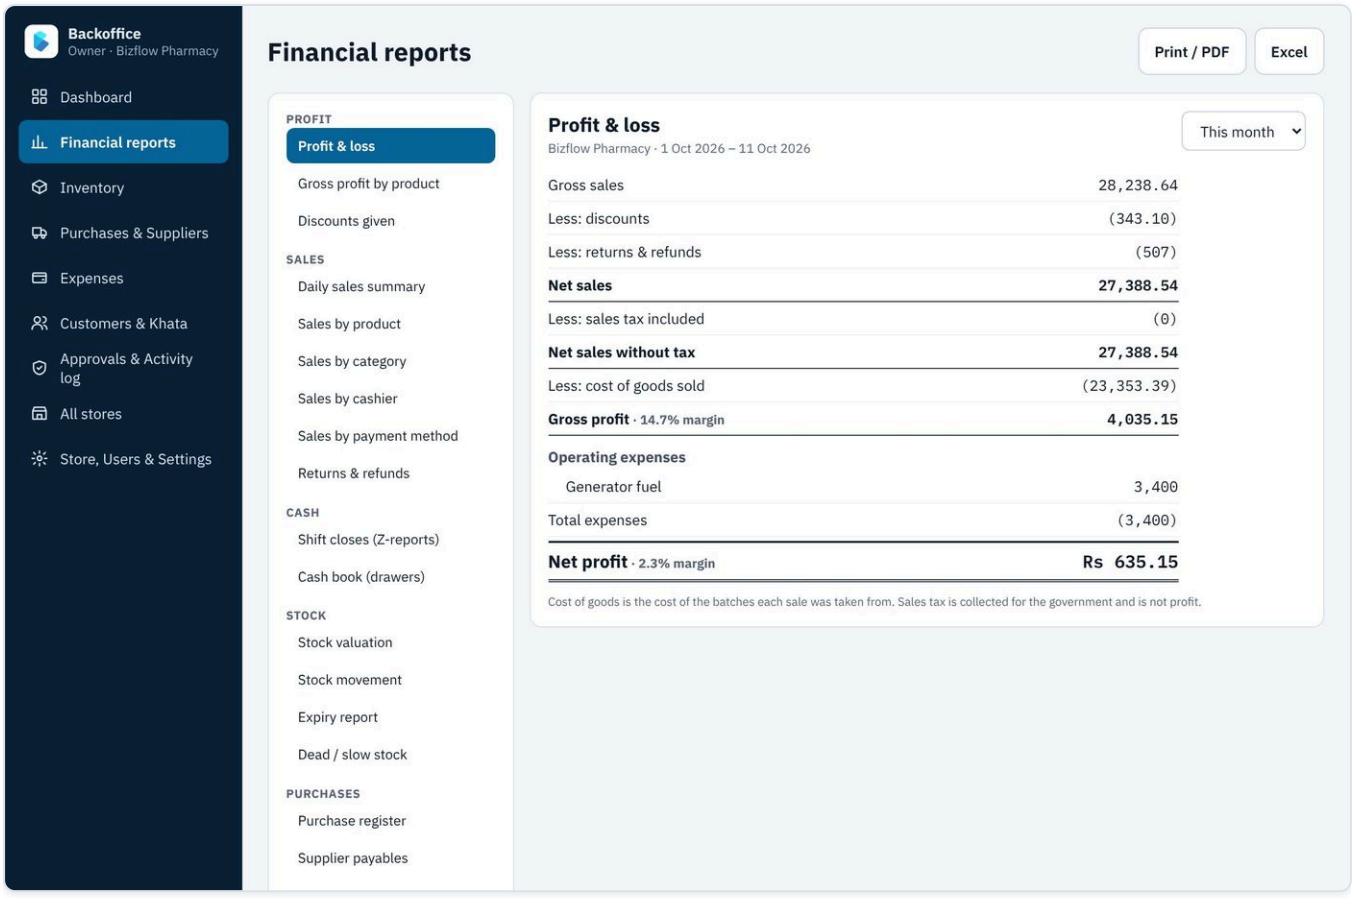

Figure 23 · Profit & loss report

Pick a report on the left, choose the period at the top right, and read it on the right. Every report can be printed or saved as a PDF with **Print / PDF**, or exported with **Excel**.

Report	Use it to…
PROFIT	
Profit & loss	See gross sales, returns, discounts, cost of goods, gross profit, expenses and net profit.
Gross profit by product	Find which products earn the most and which have thin margins.
Discounts given	Check every discount, by bill and cashier.
SALES	
Daily sales summary	Day-by-day totals.
Sales by product / category / cashier / payment method	Break sales down the way you need.
Returns & refunds	Every return with reason and condition.
CASH	
Shift closes (Z-reports)	Every closed shift with its short/over.
Cash book (drawers)	All cash in and out of each drawer, by shift and day.

Report	Use it to…
STOCK	
Stock valuation	The value of stock on hand at cost and at sale price.
Stock movement	Everything that went in and out: sales, purchases, returns, corrections, transfers.
Expiry report	Batches expiring within a chosen number of months, with their value.
Dead / slow stock	Items that have not sold for a long time, and since when.
PURCHASES, KHATA AND TAX	
Purchase register	All GRNs by supplier and invoice.
Supplier payables	What you owe each supplier and when it is due.
Khata receivables & ageing	Who owes you, and for how long (up to 30, 31–60, 61–90 and over 90 days).
Sales tax summary	Sales tax included in sales, for your tax adviser.
Branch comparison ›	Opens All stores.

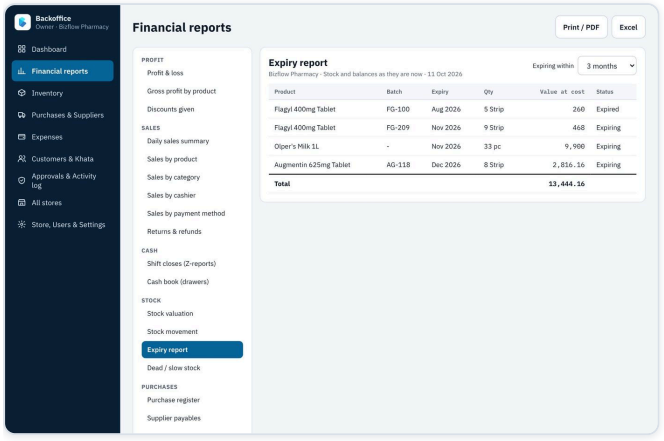

Figure 24 · Expiry report

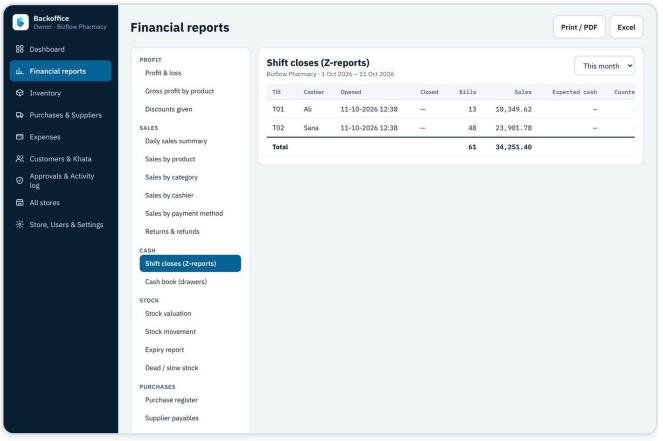

Figure 25 · Shift closes (Z-reports)

CHAPTER 6

Inventory

6.1 Products and stock

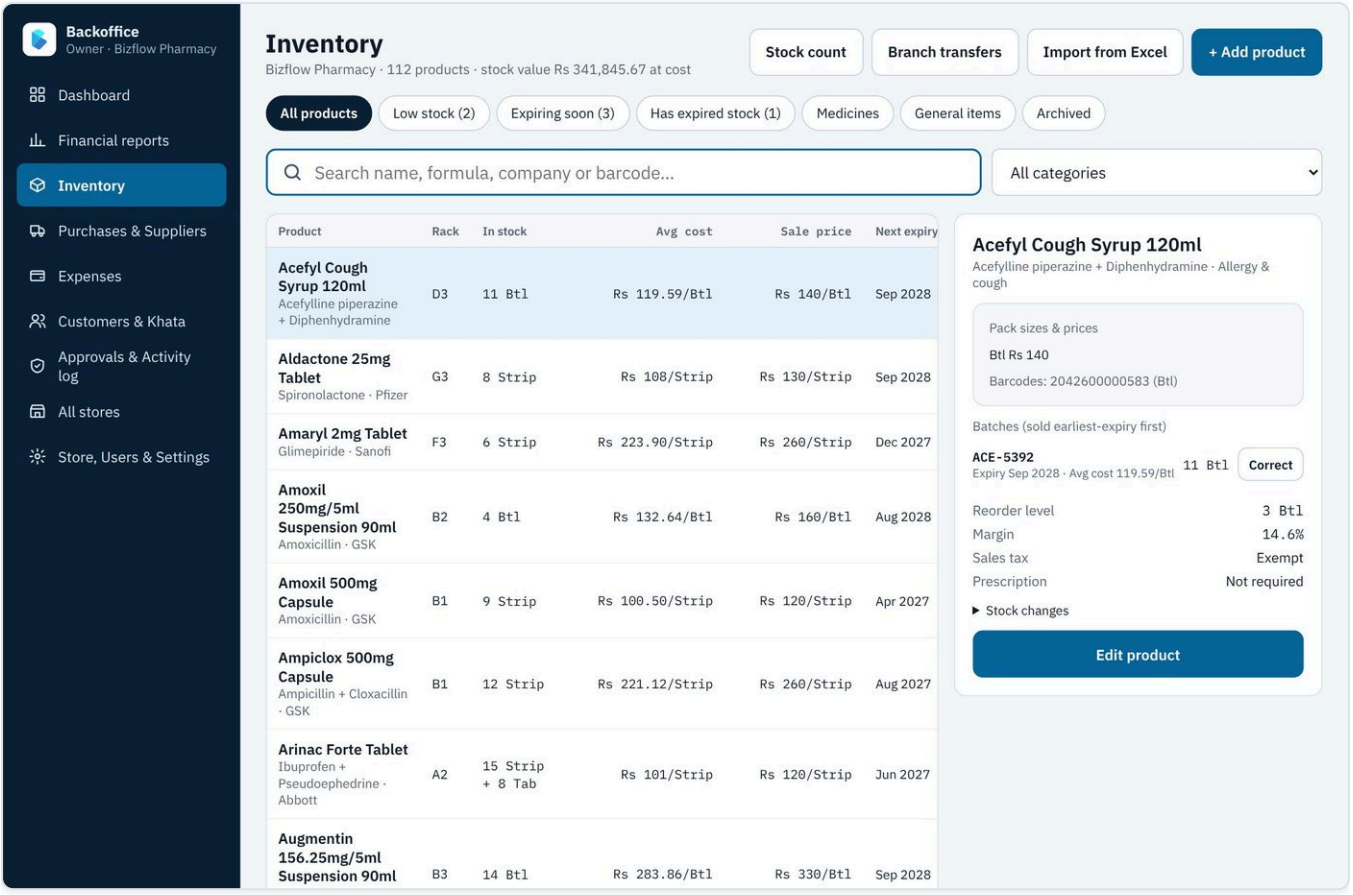

Figure 26 · Inventory with the selected product's details on the right

Item	What it does
Header	Number of products and total stock value at cost.
Stock count, **Branch transfers**, **Import from Excel**, **+ Add product**	Open those screens (explained below).
Filters	**All products**, **Low stock**, **Expiring soon**, **Has expired stock**, **Medicines**, **General items**, **Archived** (inactive products). The numbers show how many match.
Search / category	Search by name, formula, company or barcode; narrow by category.
Table	Product, rack, stock in packs and loose units (e.g. *15 Strip + 8 Tab*), average cost, sale price and next expiry. Click a row to see its details.

Product details panel

- **Pack sizes & prices** and the barcodes, with the pack each barcode belongs to.
- **Batches** in the order they will be sold (earliest expiry first), with expiry, average cost and stock. **Correct** fixes the stock of one batch.
- Reorder level, margin, sales tax and prescription status.
- **Stock changes** opens the full history of that product: every sale, purchase, return and correction with who did it.
- **Edit product** opens the product form.

6.2 Correcting stock

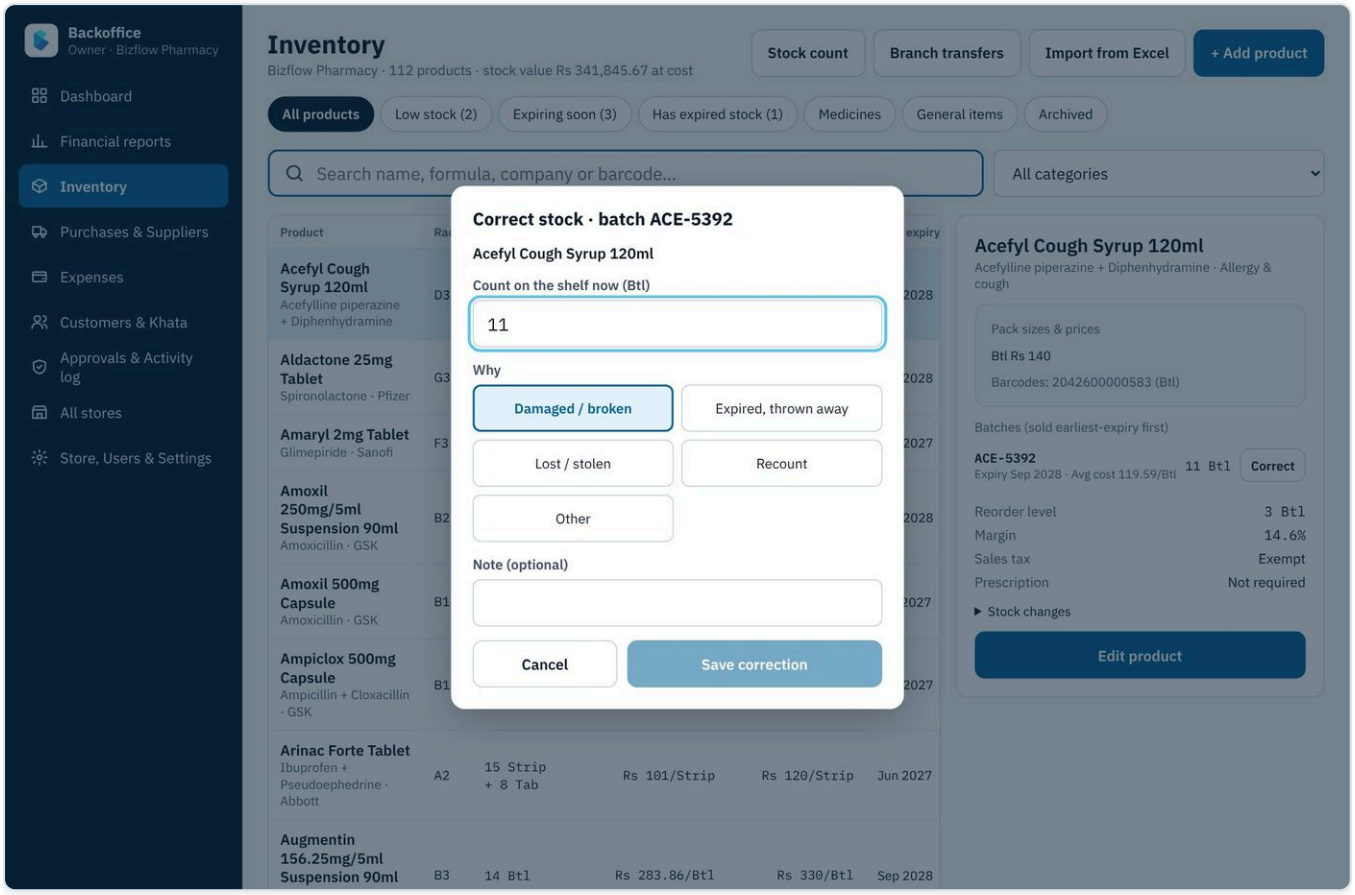

Figure 27 · Correct stock of one batch

Count on the shelf now	The real quantity of this batch on the shelf, in the pack shown.
Why	Damaged / broken, Expired thrown away, Lost / stolen, Recount, Other. Required.
Note (optional)	Any detail, e.g. *dropped two bottles*.
Save correction	Sets the stock. The difference is valued at cost and written in the activity log.

> **TIP**
> To check a whole shelf, use a stock count instead of correcting batches one by one.

6.3 Adding and editing a product

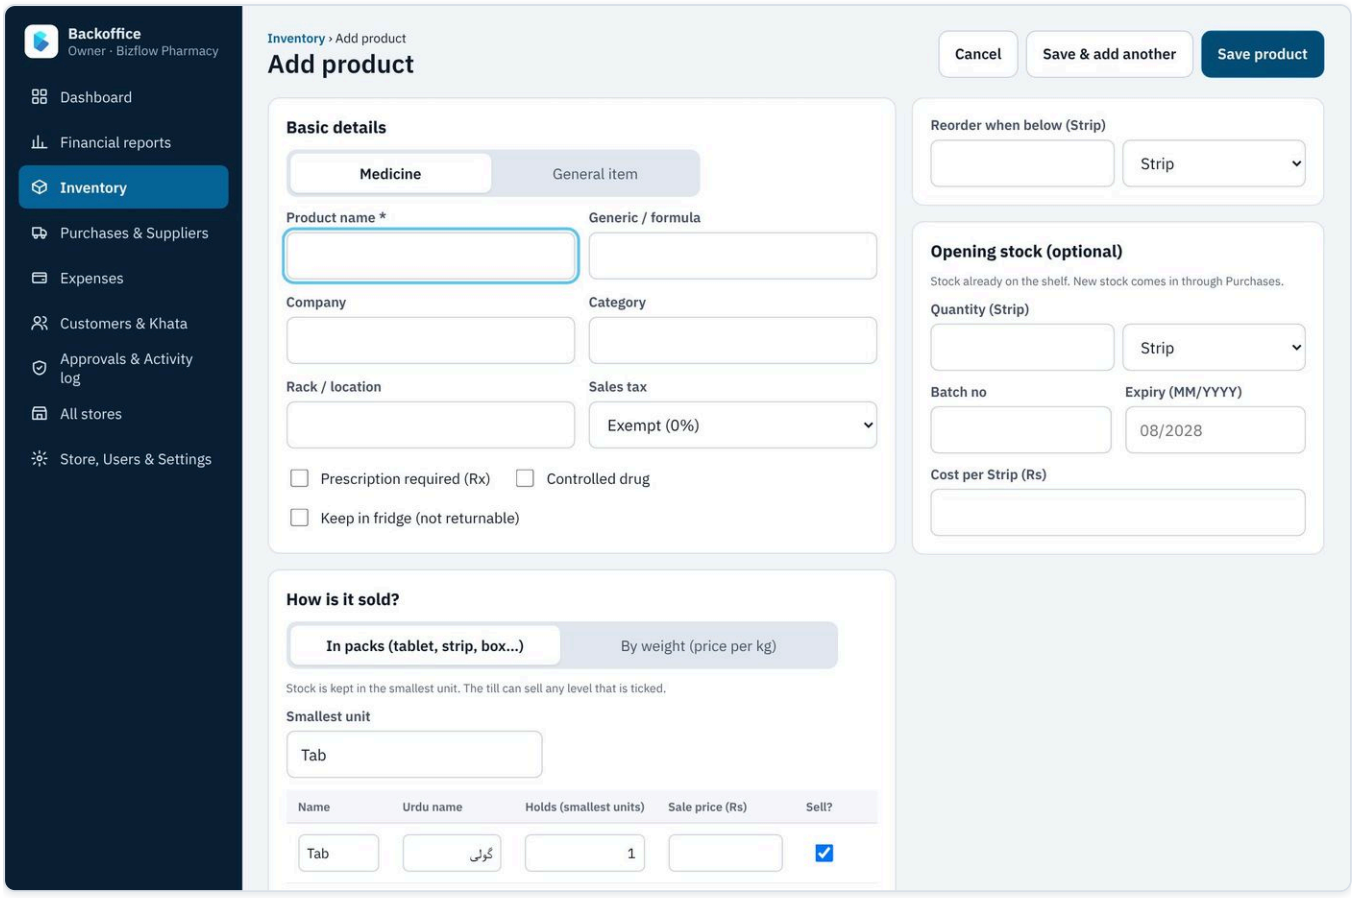

Figure 28 · Add product — the top of the form

Basic details

Medicine / **General item**	Medicines get batch, expiry and prescription options; general items are things like milk, soap or sugar.
Product name *	As printed on the pack, with strength and form, e.g. *Panadol 500mg Tablet*. Must be unique.
Generic / formula	The salt, e.g. *Paracetamol*. Lets cashiers search by formula when a brand is out of stock.
Company	Manufacturer, e.g. GSK, Getz, Abbott.
Category	Your own grouping, e.g. *Pain & fever*, *Antibiotics*. Used for filters and reports.
Rack / location	Where it sits, e.g. `B2`. Shown to cashiers and used to count one rack at a time.
Sales tax	Exempt (0%) for most medicines. Prices are always tax-inclusive; this only splits out the tax in reports and FBR invoices.
Prescription required (Rx)	Shows an **Rx** badge at the till as a reminder to ask for the prescription.
Controlled drug	Marks narcotics/psychotropics for your records.

Keep in fridge (not returnable)	Insulin, vaccines, some injections. These can’t be returned at the till.

How is it sold?

In packs / By weight	Packs for tablets, strips, bottles, pieces. By weight for loose items with a price per kg. **This can’t be changed after the product is saved.**
Smallest unit	The unit stock is counted in: Tab, Cap, Btl, Pc, Sachet...
Pack levels: Name, Urdu name	Each pack the product comes in, e.g. Tab, Strip, Box. The Urdu name is used on Urdu screens and receipts.
Holds (smallest units)	How many smallest units are in the pack: Strip = 10, Box = 200.
Sale price (Rs)	The retail price of that pack (MRP).
Sell?	Tick the packs the till may sell. Untick *Tab* if you never sell loose tablets.
+ Add pack level	Adds another, bigger pack. A hint such as *1 Strip = 10 Tab = Rs 40* helps you check the numbers.

BATCH PRICES

Each batch keeps the price printed on its pack (from the purchase). A price changed here applies to batches that don’t have their own printed price.

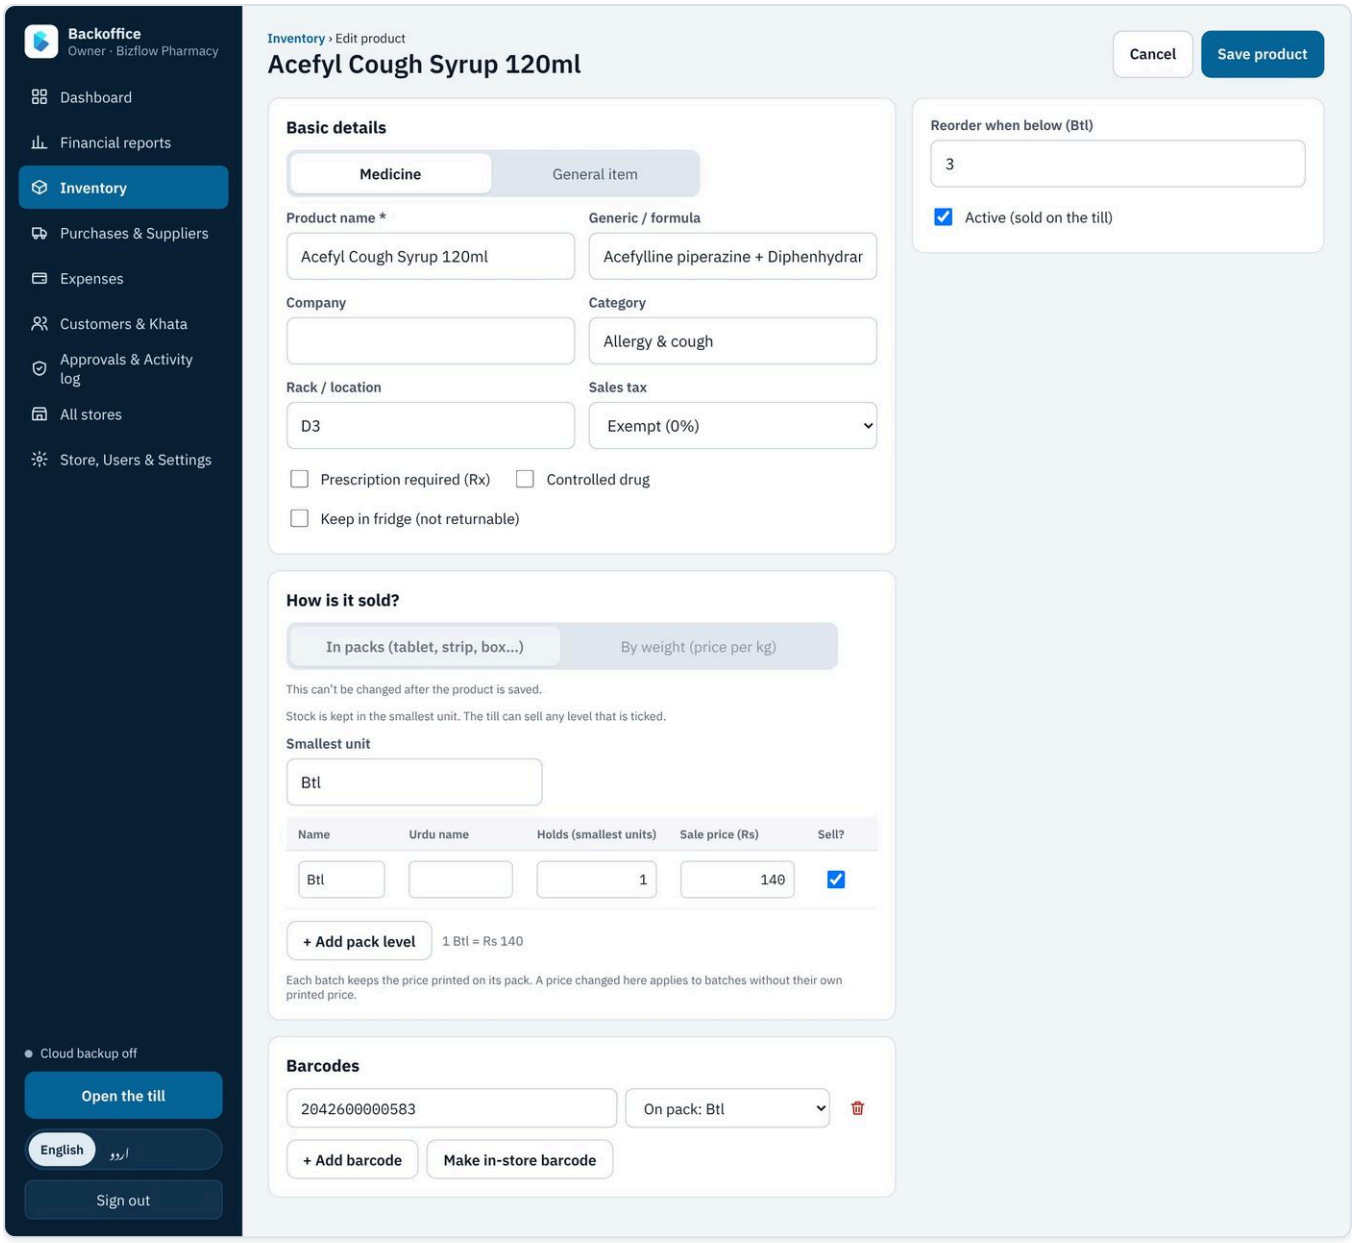

Figure 29 · Edit product — the full form, including Barcodes

Barcodes

Barcode + *On pack*	The code printed on the pack and which pack it is on. Scanning a box barcode adds a box. A product can have several barcodes; a barcode can belong to only one product.
+ Add barcode	Adds another row. Click in the box and scan.
Make in-store barcode	Creates a code for loose items that have none, so you can print a label.
Bin icon	Removes that barcode.

Right-hand panel

Reorder when below	When stock falls below this (in the pack you choose), the item shows in *Low stock*.

Active (sold on the till)	Untick to retire a product without losing its history. It moves to *Archived*.
Opening stock (new products only)	Stock already on the shelf: Quantity and pack, Batch no, Expiry (MM/YYYY) and Cost per pack. Later stock comes in through Purchases.

Buttons: **Save product**, **Save & add another** (keeps you on a blank form), **Cancel**.

6.4 Import products from Excel

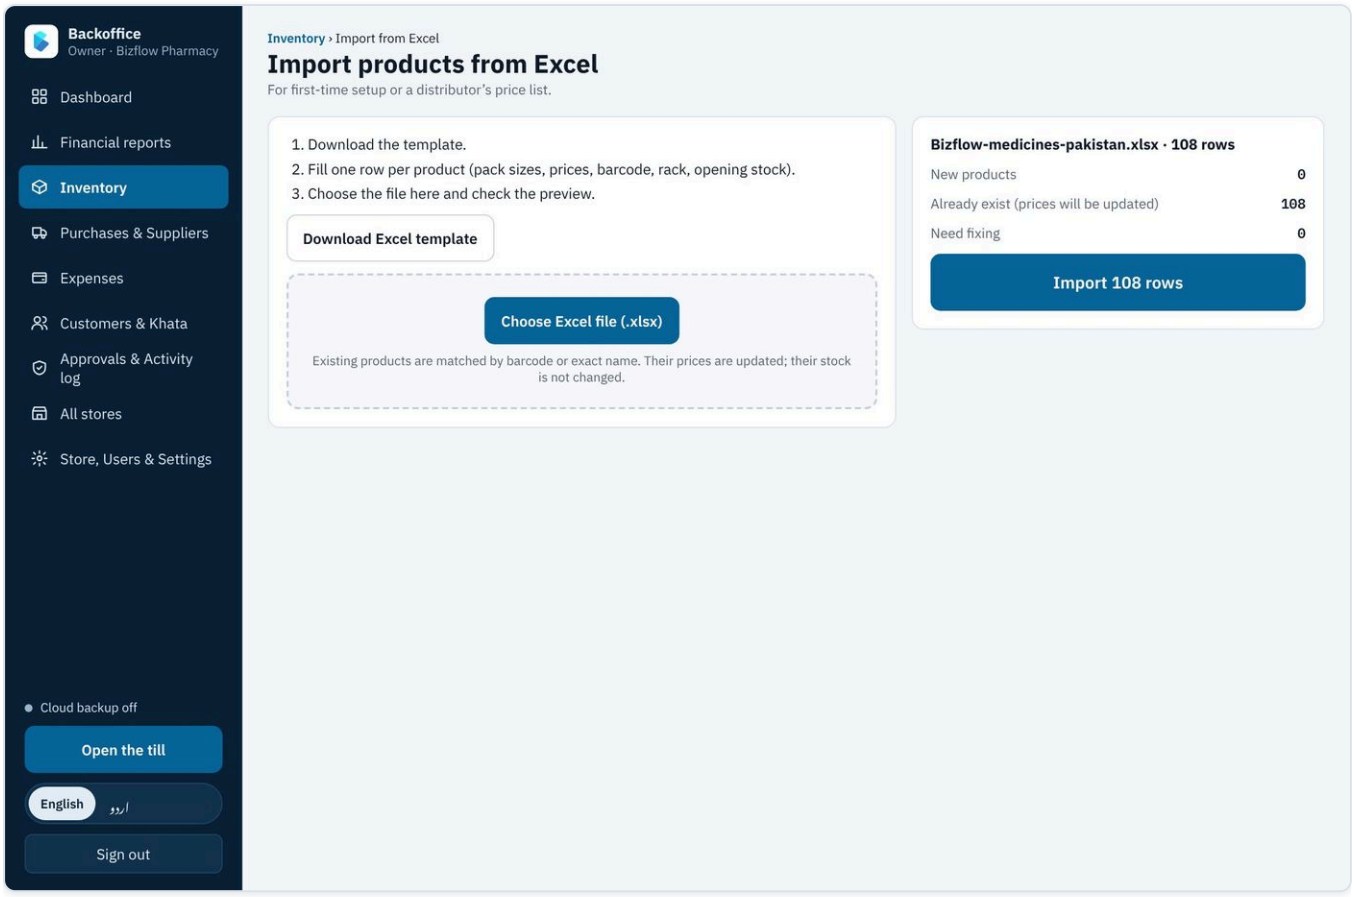

Figure 30 · Import preview — 108 rows ready

1. **Download Excel template** — saves `products-template.xlsx` with the right columns and example rows.
2. Fill one row per product (or use a distributor's list with the same columns). See the column guide below.
3. **Choose Excel file (.xlsx)** — Bizflow reads it and shows a preview: **New products**, **Already exist (prices will be updated)** and **Need fixing**. Nothing is saved yet.
4. If some rows need fixing, each problem is listed with its row number. **Download rows to fix** gives you just those rows with the problem written next to each.
5. **Import N rows** — saves the good rows.

> **MATCHING**
> Existing products are matched by barcode or exact name. Their prices are updated; their stock is not changed. Opening stock is added only for new products.

Column guide

Column	What to put
Name *	Required. Product name with strength and form.
Generic / formula, Company, Category	Optional text.
Type (Medicine / General)	*Medicine* or *General*.
Sold by (Pack / Weight)	*Pack* for most items; *Weight* for loose items.
Smallest unit (Tab, Cap, Btl, Pc)	The unit stock is counted in.
Price of smallest unit (Rs)	Price of one tablet / piece.
Sell smallest unit loose? (Y/N)	Y if you sell single tablets.
Pack 2 name / holds / price	e.g. *Strip*, *10*, *40*.
Pack 3 name / holds / price	e.g. *Box*, *200*, *780*. Holds is always in smallest units.
Price per kg (Rs, weight items)	Only for *Weight* items. Leave empty for packs.
Barcode / Barcode is on (pack name)	The code and which pack it is printed on, e.g. *Box*.
Rack	Shelf location.
Sales tax %	Usually 0 for medicines.
Prescription needed? (Y/N)	Shows the Rx badge at the till.
Reorder when below (smallest units)	e.g. 100 tablets.
Opening stock (smallest units, or grams)	Stock on hand now. Grams for weight items.
Batch no / Expiry (MM/YYYY)	For the opening stock.
Cost (Rs) of smallest unit, or per kg	What you paid, for profit reports.

6.5 Stock count

Count one shelf at a time while the shop keeps selling.

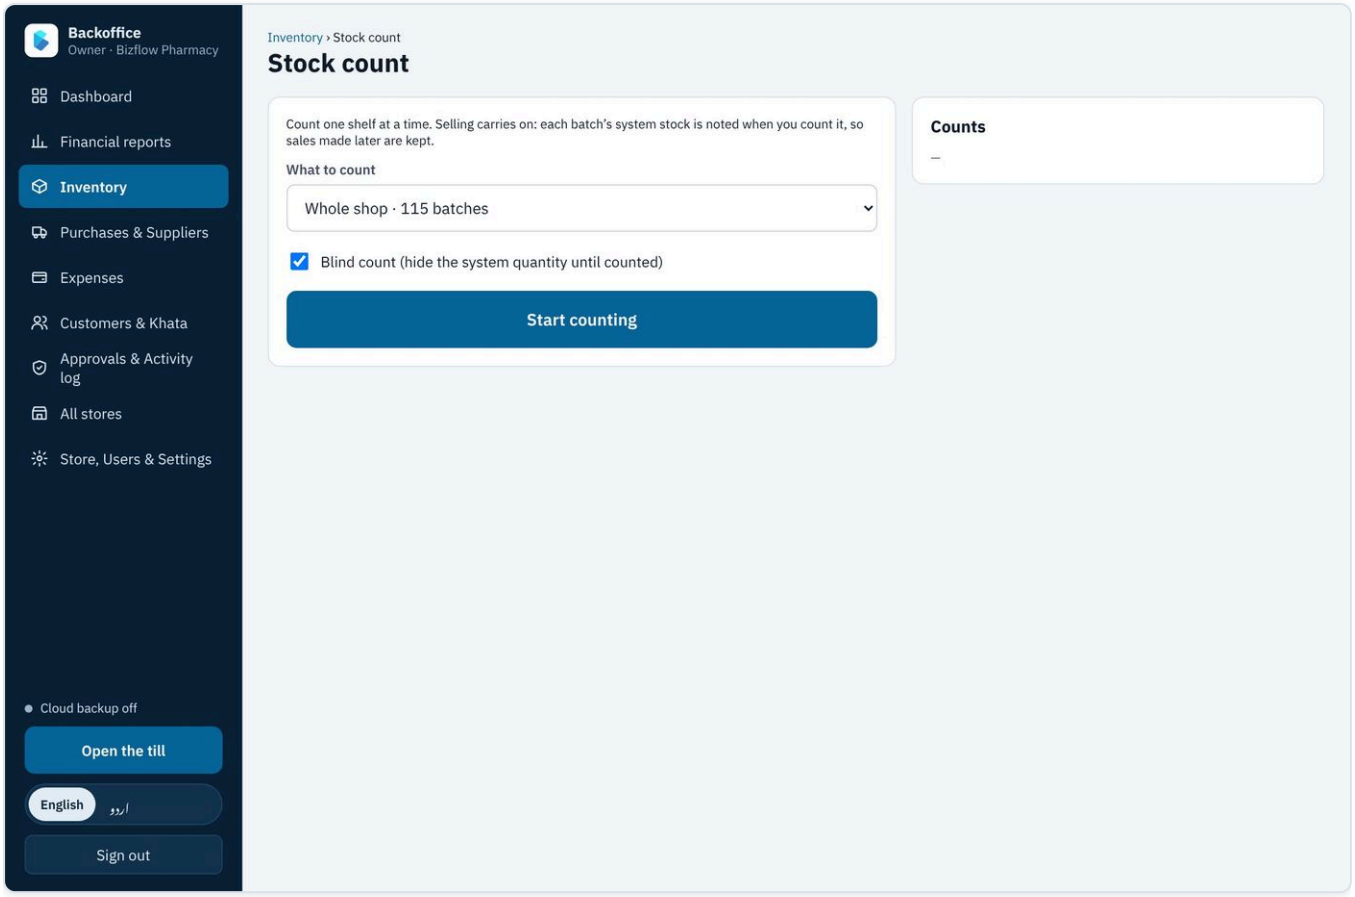

Figure 31 · Start a stock count

What to count	*Whole shop*, one rack (e.g. *Rack A1 · 5 batches*) or *Items with no rack*.
Blind count	Hides the system quantity until each line is counted, so counters don't just copy the number.
Start counting	Creates the count sheet. Earlier counts are listed under **Counts** with their status (In progress, Applied, Cancelled).

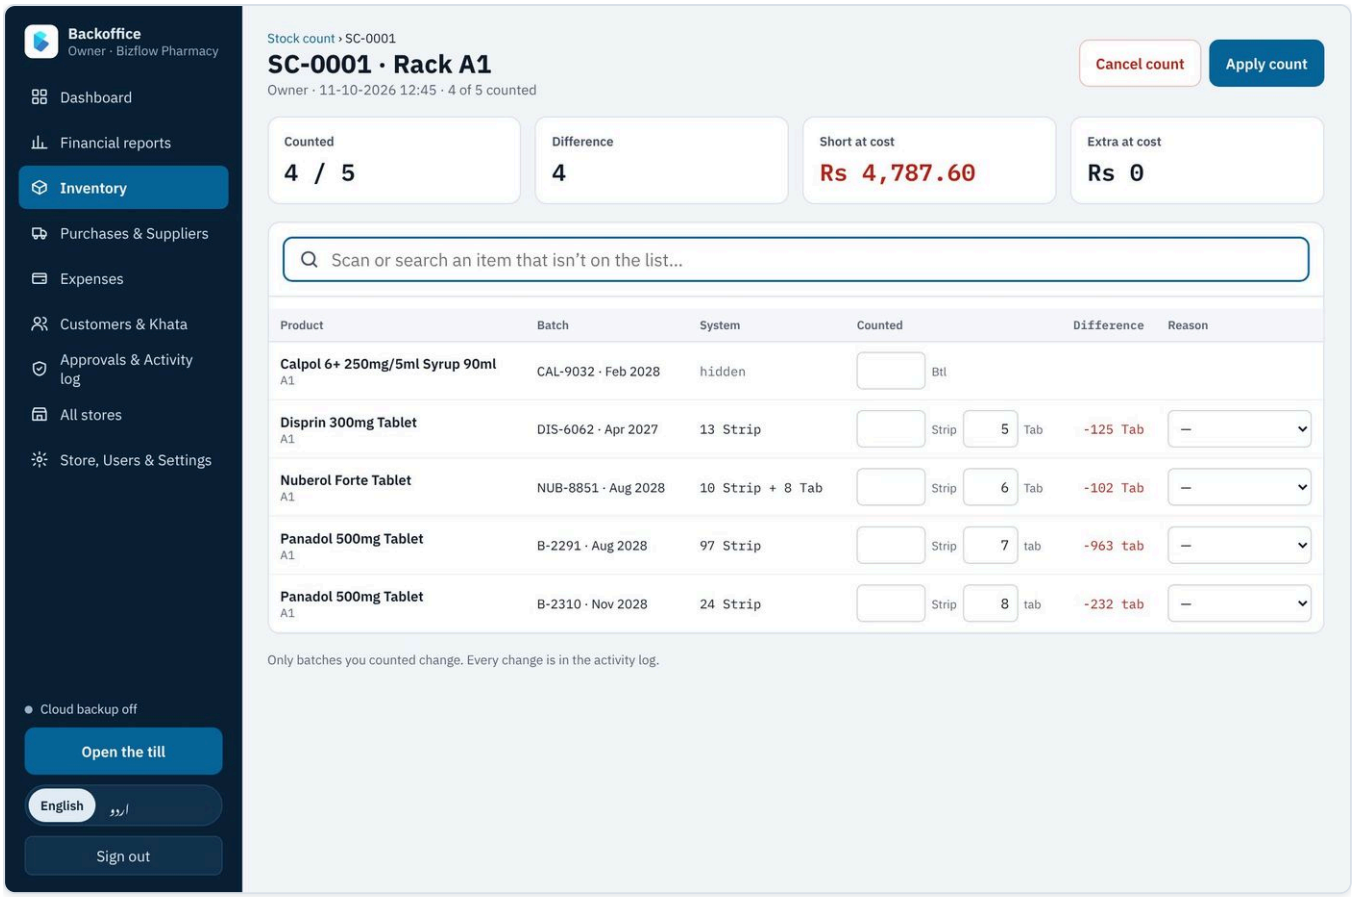

Figure 32 · Count sheet for Rack A1

- For each batch type the count in packs and loose units. The **Difference** appears in red (short) or green (extra), and **Short at cost** / **Extra at cost** total it in rupees.
- Choose a **Reason** for differences.
- Found an item that isn't on the list? Scan or search it in the box at the top to add it.
- Each line is saved as you type, so you can leave and come back.
- **Apply count** corrects only the batches you counted. **Cancel count** throws it away; nothing changes.

> **SELLING DURING A COUNT**
>
> When you count a batch, its system stock at that moment is noted. Sales made after that are kept, so you don't need to close the shop.

6.6 Branch transfers

Move stock to another branch instead of buying more.

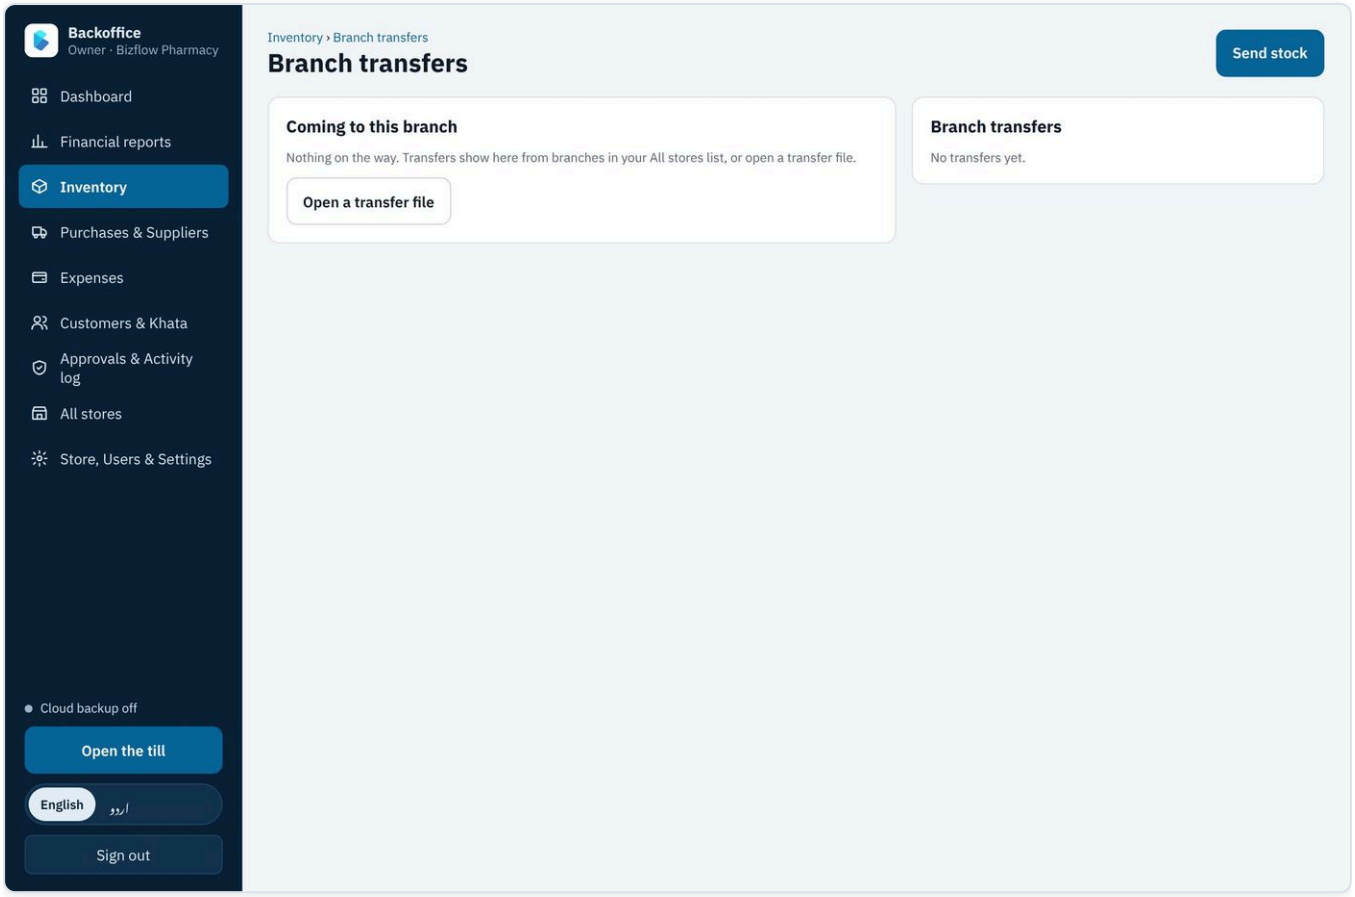

Figure 33 · Branch transfers home

Coming to this branch lists transfers sent to you by branches in your All stores list. **Open a transfer file** loads a file sent by WhatsApp or USB. On the right is the history of sent and received transfers.

Sending stock

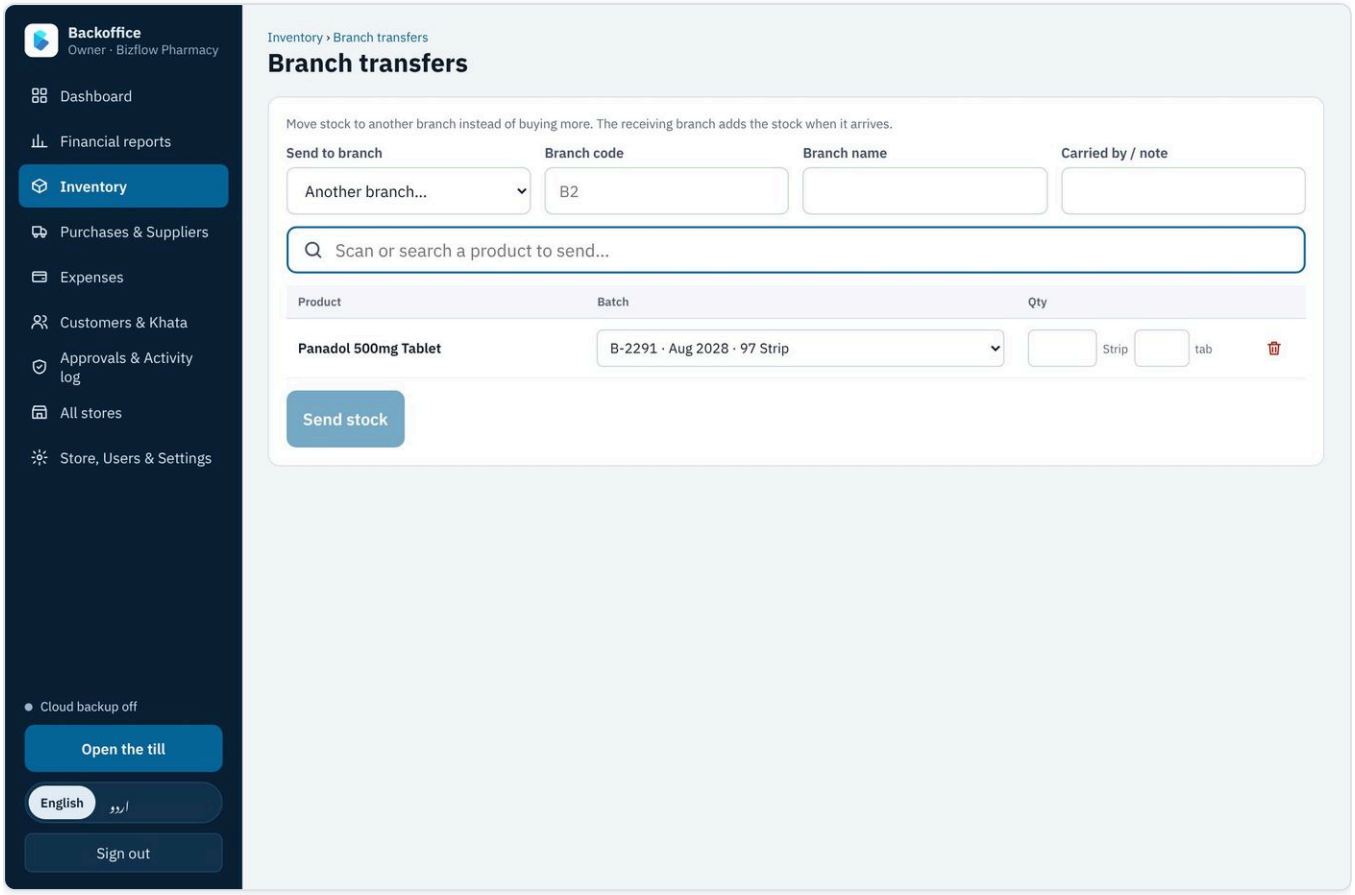

Figure 34 · Send stock to branch B2

Send to branch / Branch code / Branch name	Pick a branch from your list, or *Another branch…* and type its code and name.
Carried by / note	Who is taking it, e.g. rider name.
Product search	Scan or search each product to send.
Batch, Qty	Pick the batch and the quantity in packs and loose units. Expired batches can’t be sent.
Send stock	Takes the stock off this branch and creates a transfer note. You can then **Print transfer slip** and **Download transfer file** (for a branch that doesn’t read your cloud backup).

Receiving stock

Open the incoming transfer, check each line and type what actually arrived. Choose a reason for any difference (Broken in transit, Missing, Sent less by mistake), then **Confirm received**. The stock is added under the same batch numbers and expiry dates.

CHAPTER 7

Purchases & suppliers

7.1 New purchase (GRN)

Use this every time stock arrives from a distributor. It adds the stock with its batches and records what you owe.

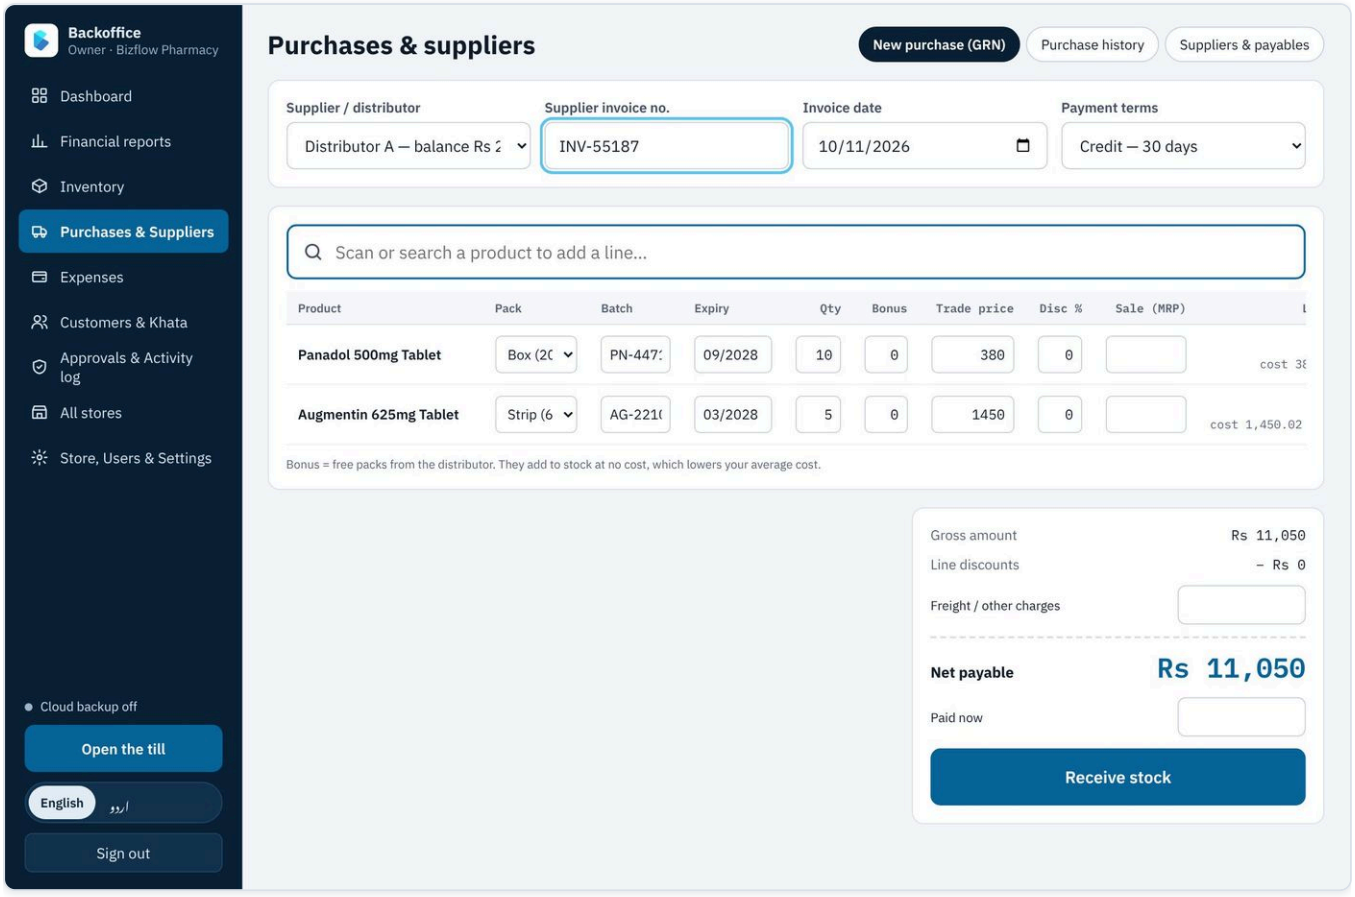

Figure 35 · Receiving two products from Distributor A on 30 days credit

Field	What to enter
Supplier / distributor	Choose the supplier. Their current balance is shown. *+ New supplier* at the bottom of the list adds one.
Supplier invoice no.	The number on the distributor's bill, so you can find it later.
Invoice date	Date on the bill.
Payment terms	*Cash on delivery* or credit days (e.g. 30 days). Sets the due date in Supplier payables.
Product search	Scan or search each product to add a line.
Pack	The pack the distributor bills in (Box, Strip...).
Batch / Expiry	From the pack. Expiry as MM/YYYY.

Field	What to enter
Qty / Bonus	Packs billed, and free bonus packs. Bonus packs add to stock at no cost and lower your average cost.
Trade price / Disc %	Price per pack on the invoice and any line discount.
Sale (MRP)	The retail price printed on this batch. Leave empty to keep the product's current price.
Cost	Shown at the end of each line: the real cost per pack after bonus, discount and freight.
Freight / other charges	Delivery charges. They are spread over the lines by value.
Net payable	What you owe for this invoice.
Paid now	Amount paid on delivery. The rest goes to the supplier's balance.
Receive stock	Saves the purchase and adds the stock.

7.2 Purchase history

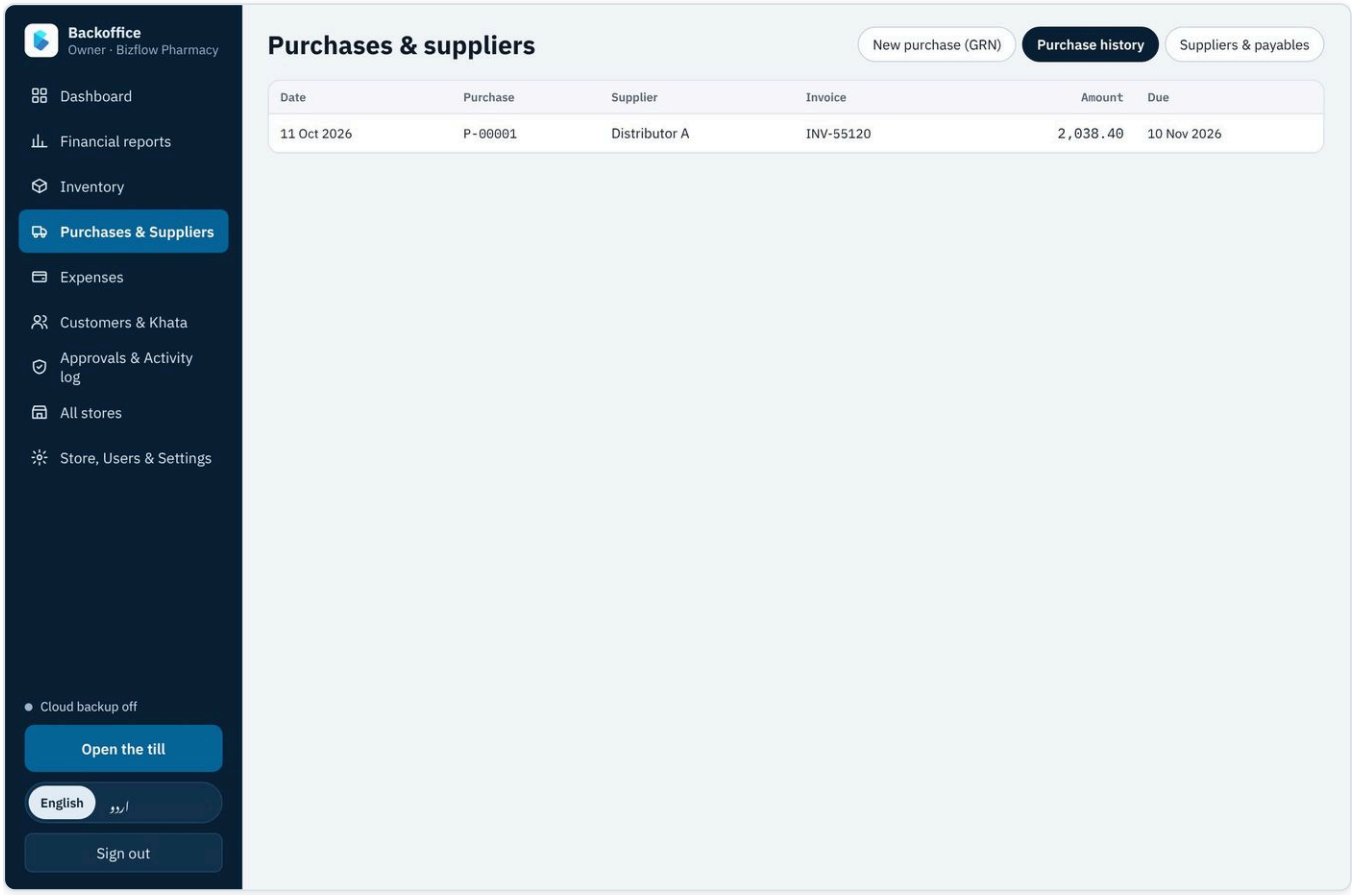

Figure 36 · Purchase history

Every GRN with date, number, supplier, invoice number, amount and status. Click one to see its lines.

7.3 Suppliers & payables

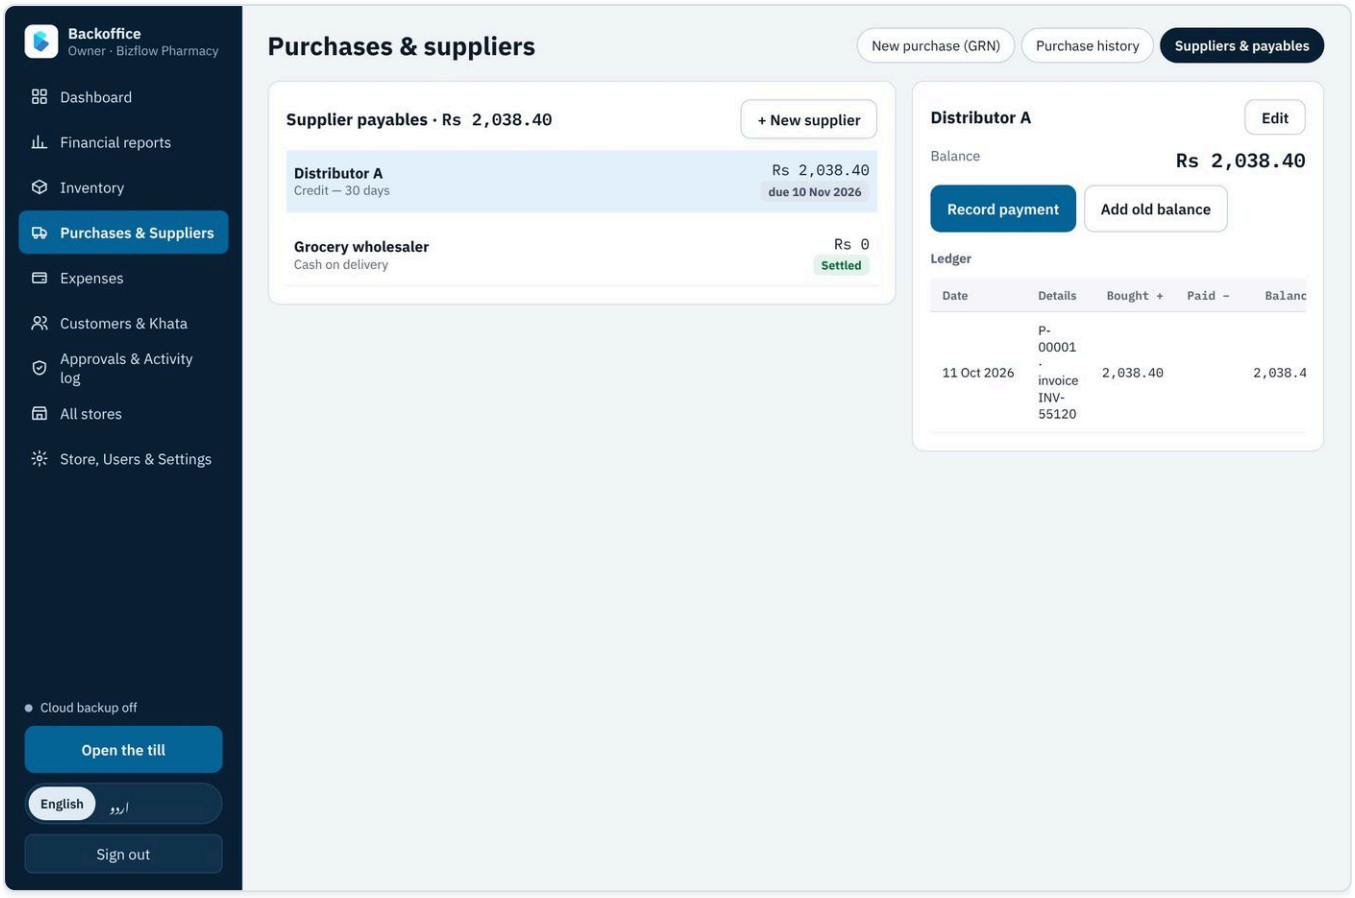

Figure 37 · Supplier payables and ledger

- The left list shows each supplier with their terms and balance, and when the next amount is due. **+ New supplier** adds one.
- The right side shows the selected supplier's balance and ledger: each invoice (*Bought +*) and payment (*Paid −*) with the running balance.
- **Edit** changes name, phone and terms. **Add old balance** enters what you owed before using Bizflow.

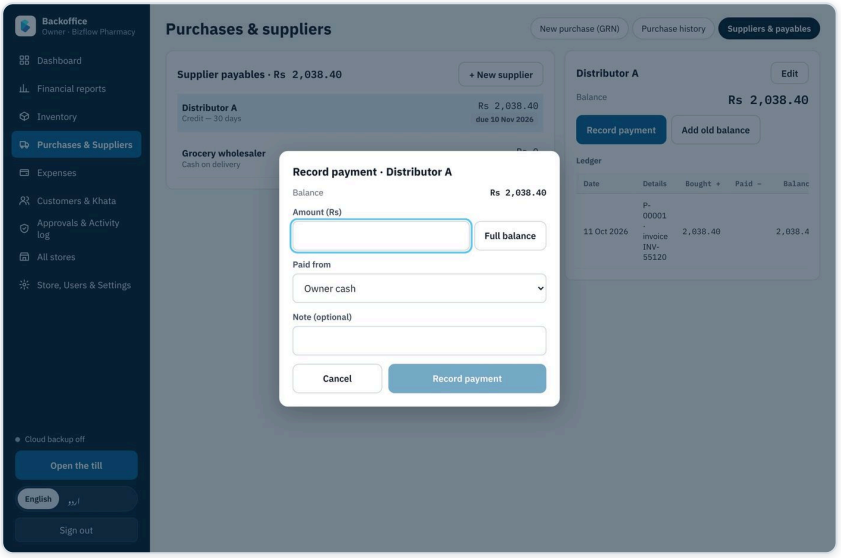

Figure 38 · Record payment

Amount (Rs)	Amount paid. **Full balance** fills the whole balance.
Paid from	*Owner cash*, *Bank*, *Cash drawer* or JazzCash / Easypaisa. Paying from the cash drawer reduces that drawer's expected cash.
Note	Cheque number, etc.

CHAPTER 8

Expenses and khata

8.1 Expenses

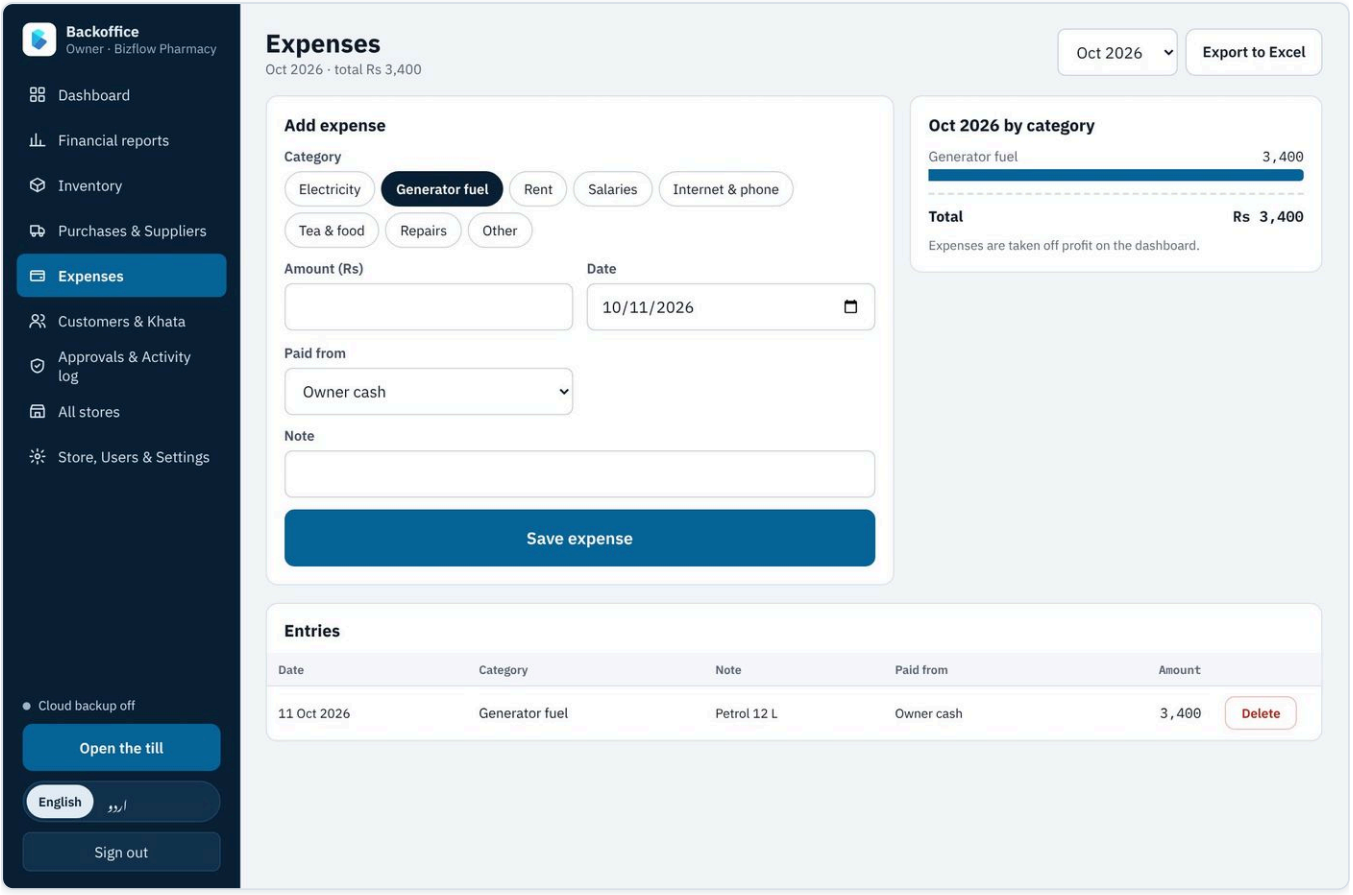

Figure 39 · Expenses for October

Category	Electricity, Generator fuel, Rent, Salaries, Internet & phone, Tea & food, Repairs, Other.
Amount (Rs), Date	How much and when.
Paid from	Owner cash, Bank, Cash drawer or JazzCash / Easypaisa. *Cash drawer* takes it out of the till's expected cash.
Note	e.g. *Petrol 12 L*.
Save expense	Adds it. Expenses are taken off profit on the dashboard and in Profit & loss.
Month / Export to Excel	Choose the month; export the list.
Entries → Delete	Removes a mistaken entry (logged).

8.2 Customers & khata

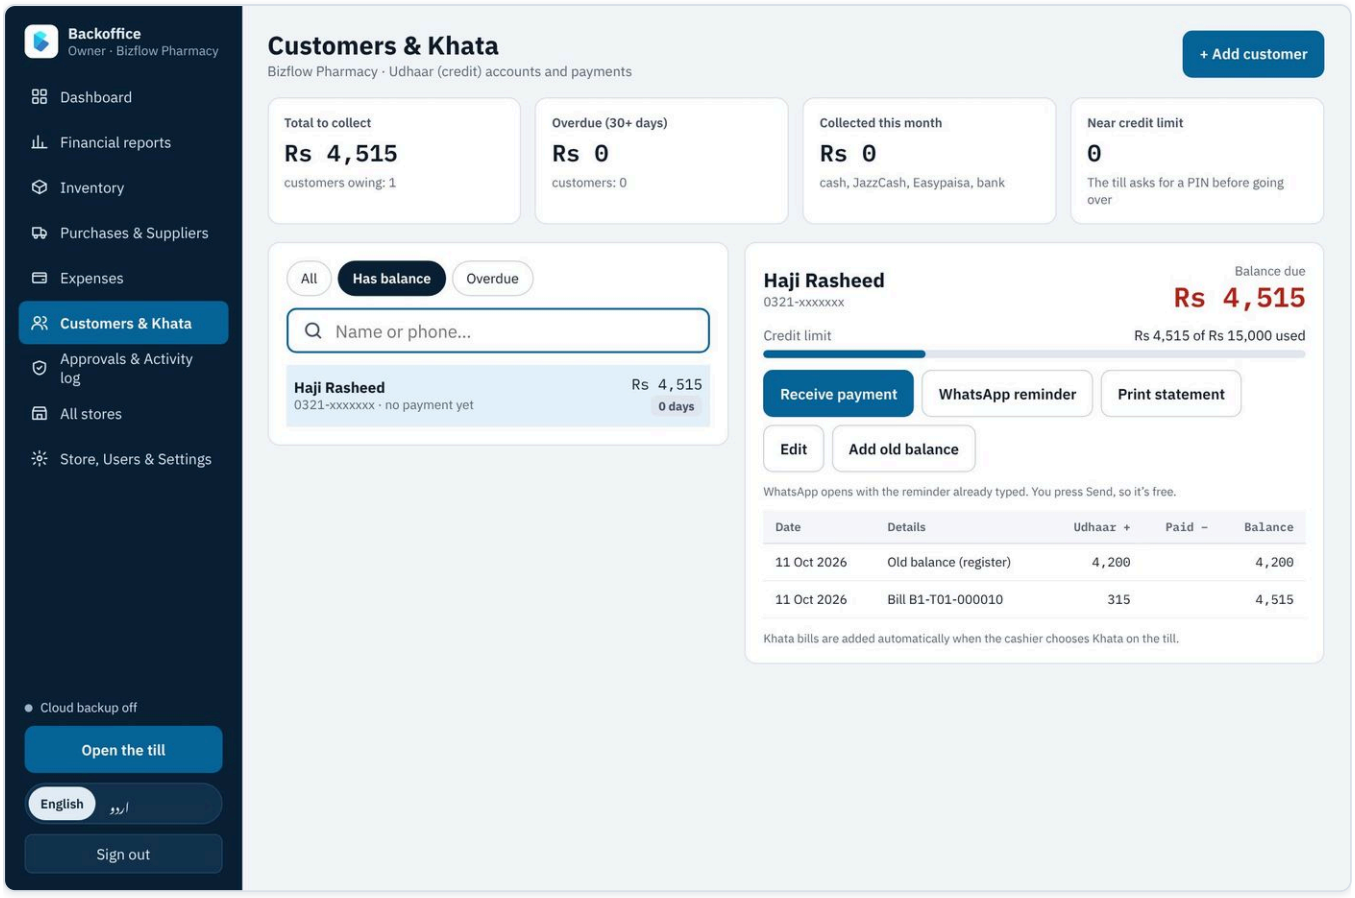

Figure 40 · A customer's khata with credit limit and ledger

Item	What it does
Total to collect	All udhaar outstanding.
Overdue (30+ days)	Customers who haven't paid for more than 30 days.
Collected this month	Payments received by cash, JazzCash, Easypaisa or bank.
Near credit limit	Customers close to their limit. The till asks for a PIN before going over.
All / **Has balance** / **Overdue**, search	Find a customer by name or phone.
Balance due / Credit limit bar	What they owe and how much of their limit is used.
Receive payment	Records money the customer pays (see below).
WhatsApp reminder	Opens WhatsApp with a polite reminder already typed. You press Send, so it is free.
Print statement	Prints the ledger on the receipt printer.
Edit	Name, phone, credit limit, receipt language, active.
Add old balance	Enters udhaar from your old register.

Item	What it does
Ledger	Every bill (*Udhaar +*), payment and refund (*Paid –*) with the running balance. Khata bills are added automatically from the till.
+ Add customer	Create a customer before their first khata sale.

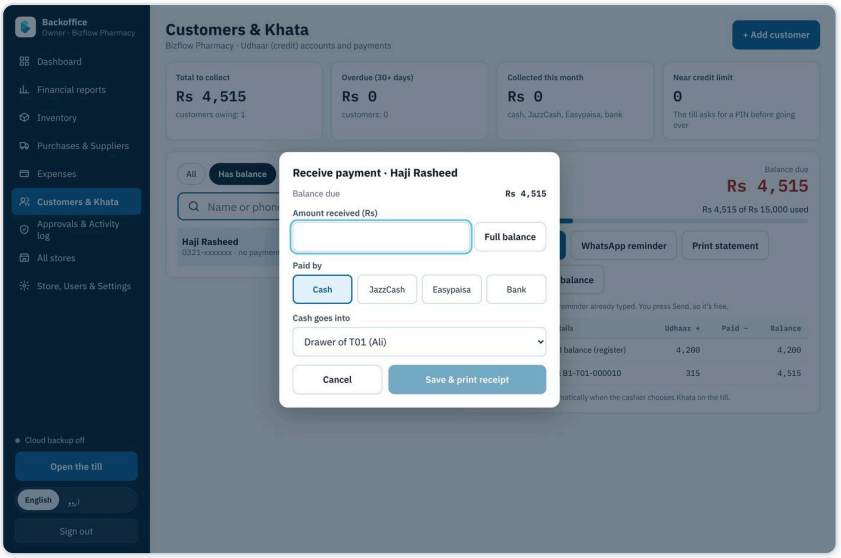

Figure 41 · Receive payment

Amount received	What the customer paid. **Full balance** fills it in.
Paid by	Cash, JazzCash, Easypaisa or Bank.
Cash goes into	For cash: the drawer that received it, so the shift's expected cash is right.
Save & print receipt	Records the payment and prints a receipt with the new balance.

CHAPTER 9

Control and branches

9.1 Approvals & activity log

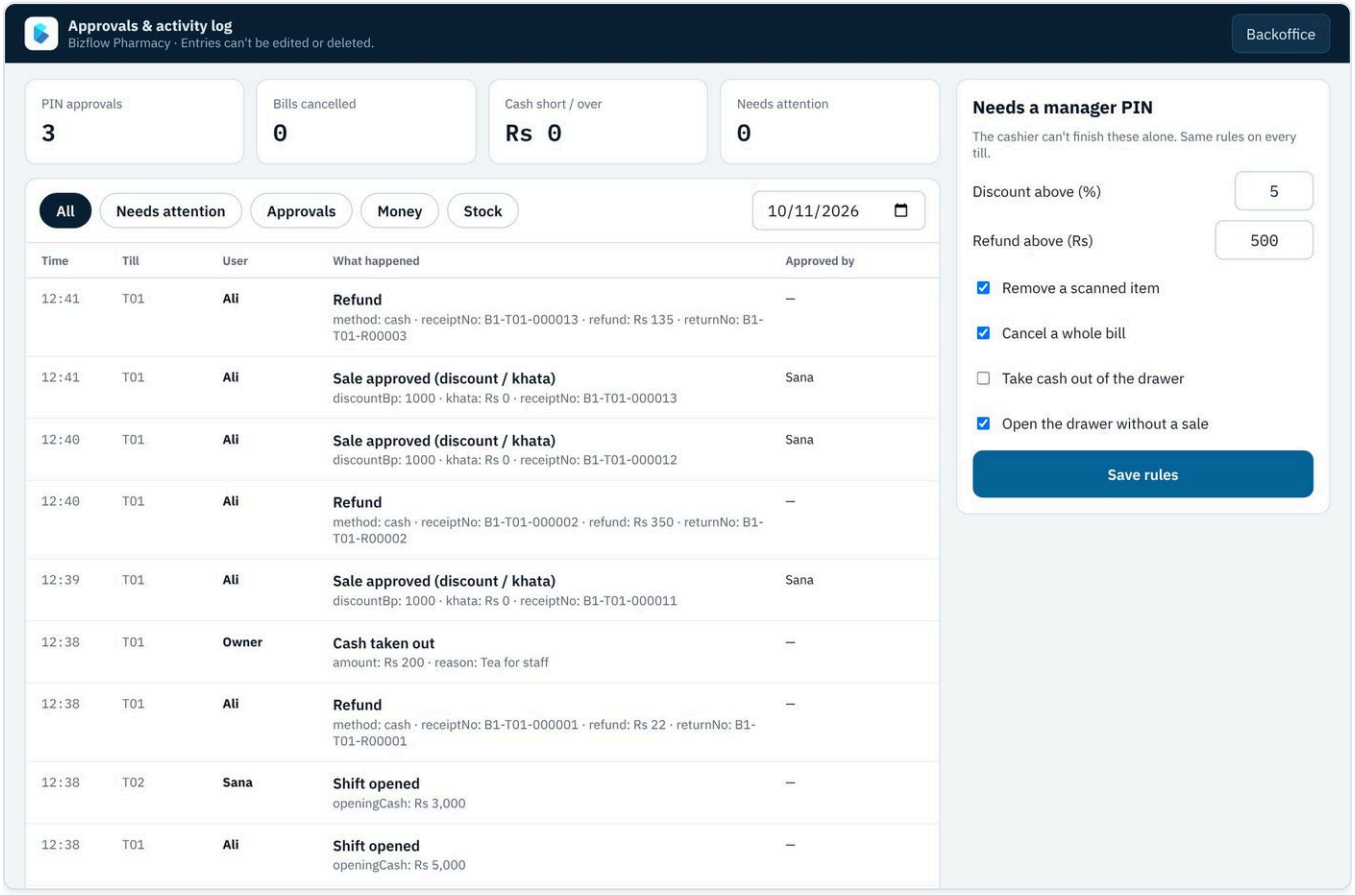

Figure 42 · Activity log with the manager-PIN rules on the right

Every important action is written here: sales approved with a PIN, refunds, cancelled bills, cash in/out, drawer openings, stock corrections, price changes and shift opens/closes. **Entries can't be edited or deleted.**

Top cards	PIN approvals, bills cancelled, cash short/over and items that need attention for the chosen day.
Filters	All, Needs attention, Approvals, Money, Stock, and the date.
Columns	Time, till, user, what happened (with details such as receipt number and amount) and who approved it.

Needs a manager PIN

Discount above (%)	Discounts higher than this need approval. Default 5.
Refund above (Rs)	Refunds higher than this need approval. Default 500.
Remove a scanned item	Stops items from being quietly removed after scanning.

Cancel a whole bill	Needs approval to cancel.
Take cash out of the drawer	Needs approval for cash out.
Open the drawer without a sale	Needs approval for *Open drawer*.
Save rules	Applies the rules on every till at once.

9.2 All stores

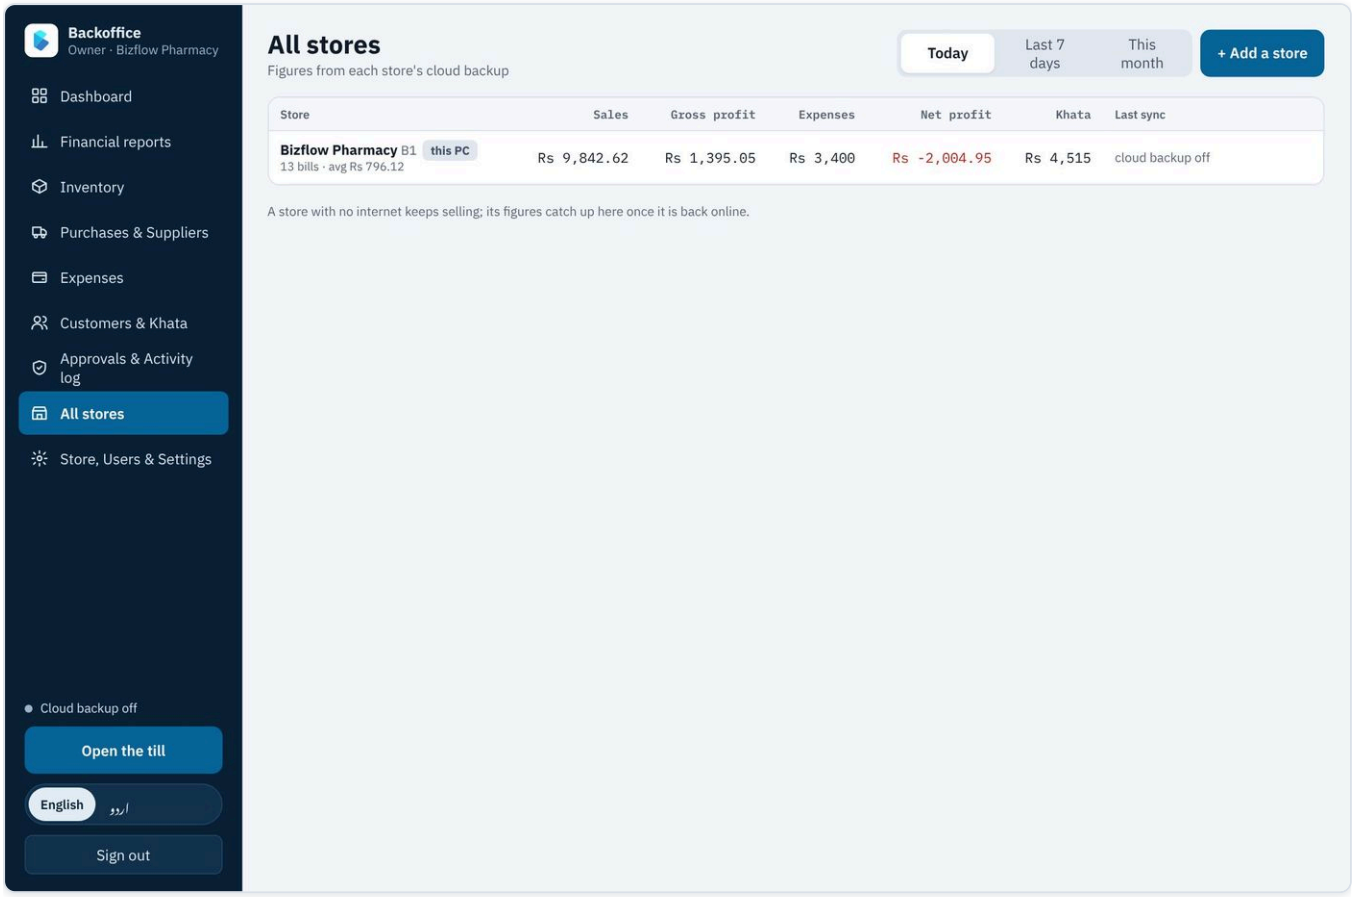

Figure 43 · All stores — branch comparison

See every branch's sales, gross profit, expenses, net profit, khata and last sync time in one table, for Today, Last 7 days or This month. Each branch must have cloud backup on.

+ Add a store: paste the other store's cloud database URL and a token (a read-only token is best). Its figures are read from the cloud. A store with no internet keeps selling; its figures catch up here once it is back online.

CHAPTER 10

Store, users & settings

10.1 Store details and receipt

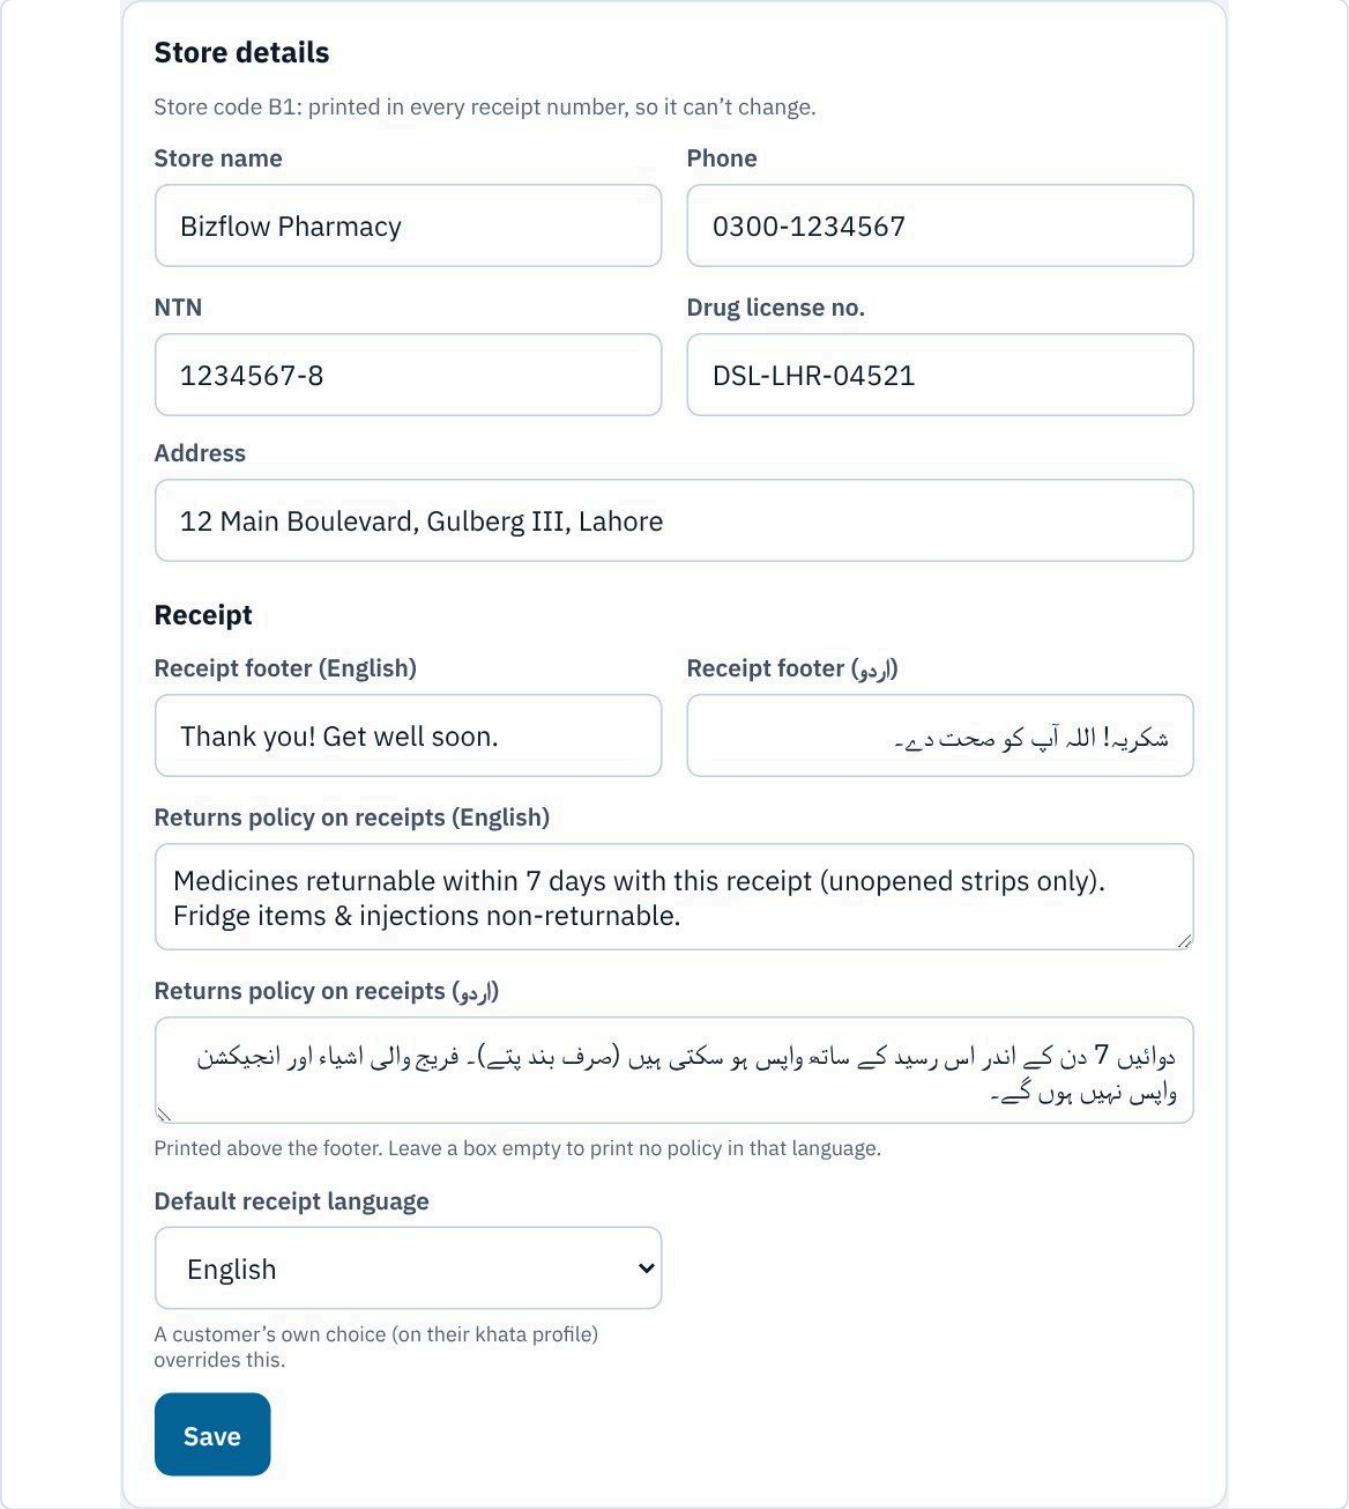

Figure 44 · Store details and receipt text

Store name, Phone, Address	Printed at the top of receipts.

NTN	Your National Tax Number, printed on receipts.
Drug license no.	Printed on receipts as *Drug Lic*.
Receipt footer (English / اردو)	The last line of the receipt, e.g. *Thank you! Get well soon.*
Returns policy on receipts (English / اردو)	Printed above the footer, e.g. *Medicines returnable within 7 days with this receipt.*... **Leave a box empty to print no policy** in that language.
Default receipt language	English or Urdu. A customer's own choice (on their khata profile) overrides this.
Save	Saves; the next receipt uses the new text.

The store code (e.g. B1) is shown at the top and can't be changed, because it is inside every receipt number.

10.2 Users & access

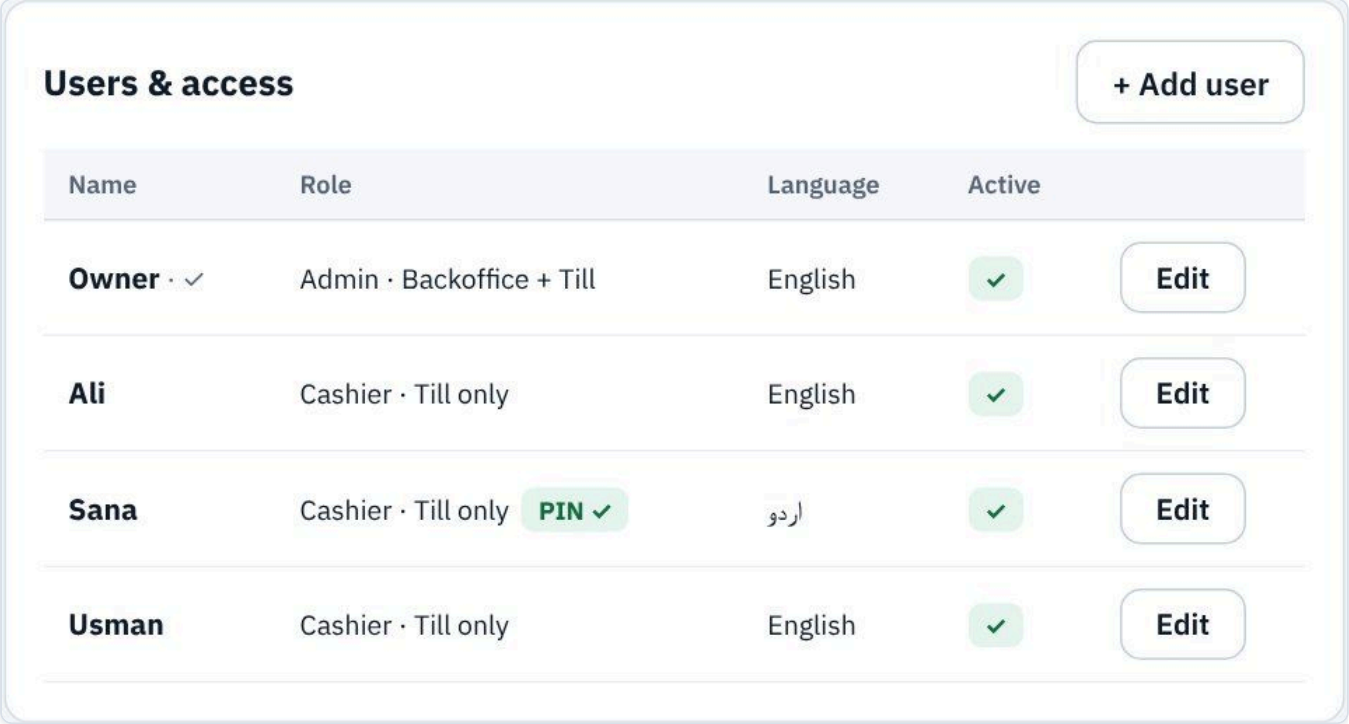

Figure 45 · Users & access

The list shows each person's role, language and whether they are active. PIN ✓ means the cashier can approve. + Add user creates a login; Edit changes one.

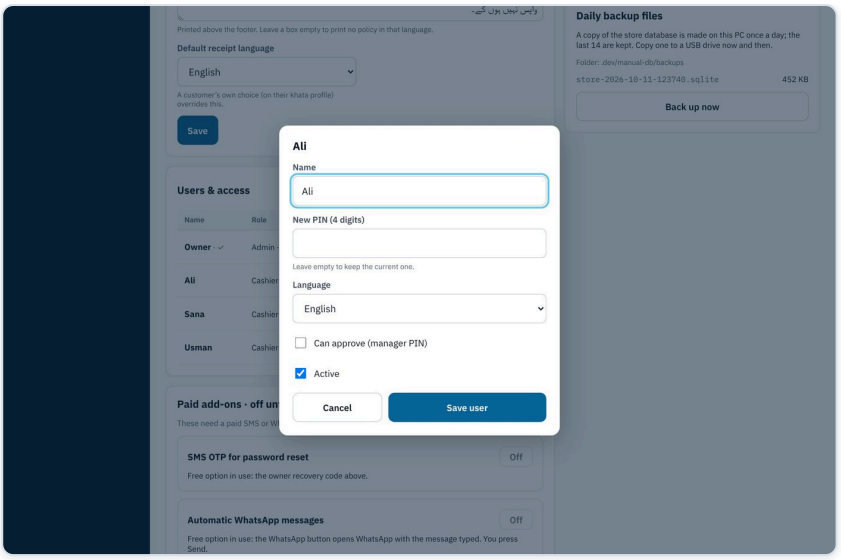

Figure 46 · Edit user

Name	Shown on the sign-in screen, receipts and the activity log.
Role (new users)	*Cashier · Till only* or *Admin · Backoffice + Till*.
PIN (4 digits) / Password	Cashiers use a 4-digit PIN; admins a password of 8+ characters. When editing, leave empty to keep the current one.
Language	The language the app opens in for this person.
Can approve (manager PIN)	Lets this cashier approve discounts, refunds etc. for others.
Active	Untick when someone leaves. Their history stays; they can no longer sign in.

IMPORTANT

Give every person their own login and never share PINs. The activity log is only as honest as the logins.

10.3 Owner recovery code

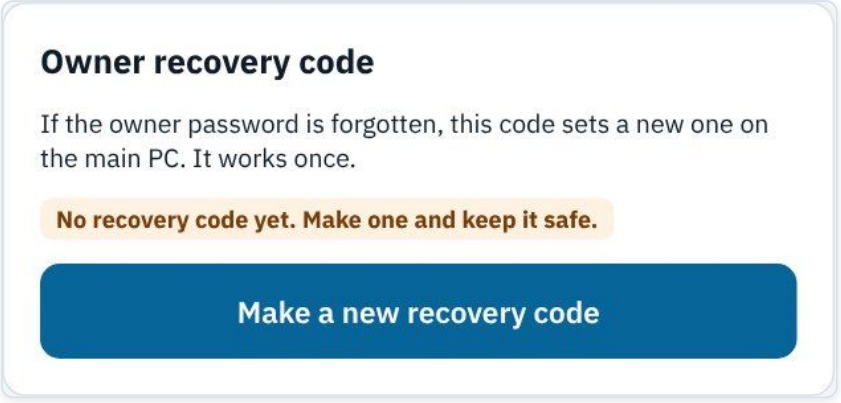

Figure 47 · Owner recovery code

If the owner password is forgotten, this code sets a new one on the main PC. Press **Make a new recovery code**, write it down or print it, and keep it somewhere safe outside the shop. The

code is shown **only once**. It works once; make a new one after using it. Making a new code stops any older code from working.

10.4 Cloud backup

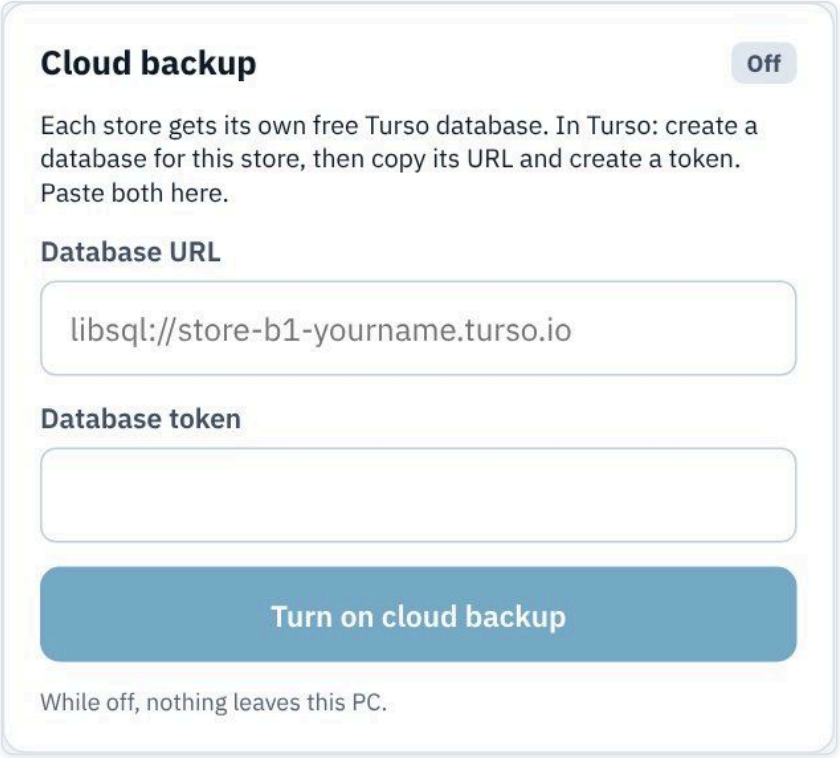

Figure 48 · Cloud backup

Each store gets its own free Turso database. With cloud backup on, every sale and change is copied to the cloud within moments, so a broken or stolen PC loses nothing, and the owner can see all branches in All stores.

1. Create a free account at turso.tech. Create a database for this store (e.g. `store-b1`).
2. Copy its **Database URL** (starts with `libsql://`) and create a **token**.
3. Paste both here and press **Turn on cloud backup**.

The status in the bottom-left of the Backoffice shows *Cloud backed up · 12:41*, *Offline · N changes waiting* (no internet; it catches up automatically) or *Cloud backup off*. While off, nothing leaves this PC. Private settings such as the FBR token are never sent to the cloud.

10.5 Daily backup files

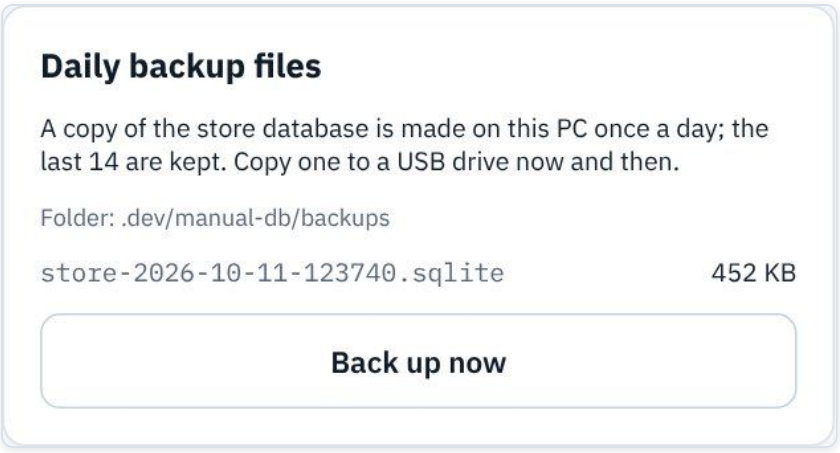

Figure 49 · Daily backup files

A copy of the store database is made on the main PC once a day; the last 14 are kept in the folder shown. **Back up now** makes one immediately. Copy one to a USB drive now and then, and always before reinstalling Windows.

10.6 Paid add-ons

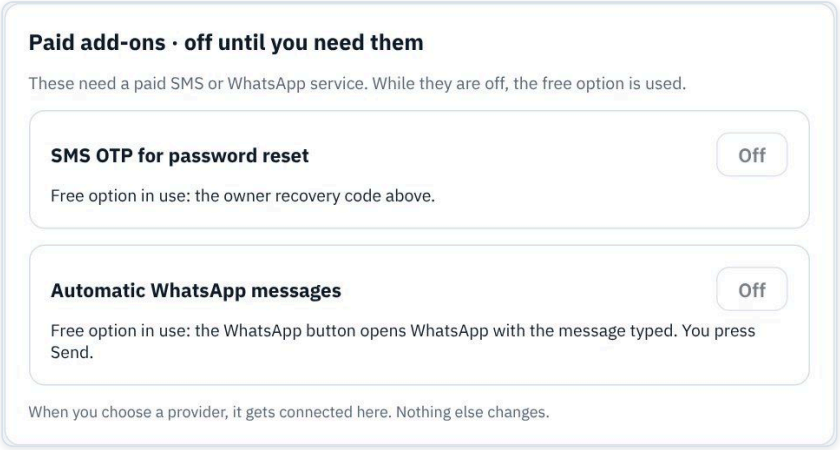

Figure 50 · Paid add-ons

SMS OTP for password reset and automatic WhatsApp messages need a paid SMS/WhatsApp provider and are off. While off, the free option is used: the owner recovery code, and the WhatsApp button that opens WhatsApp with the message typed for you.

10.7 FBR invoice reporting

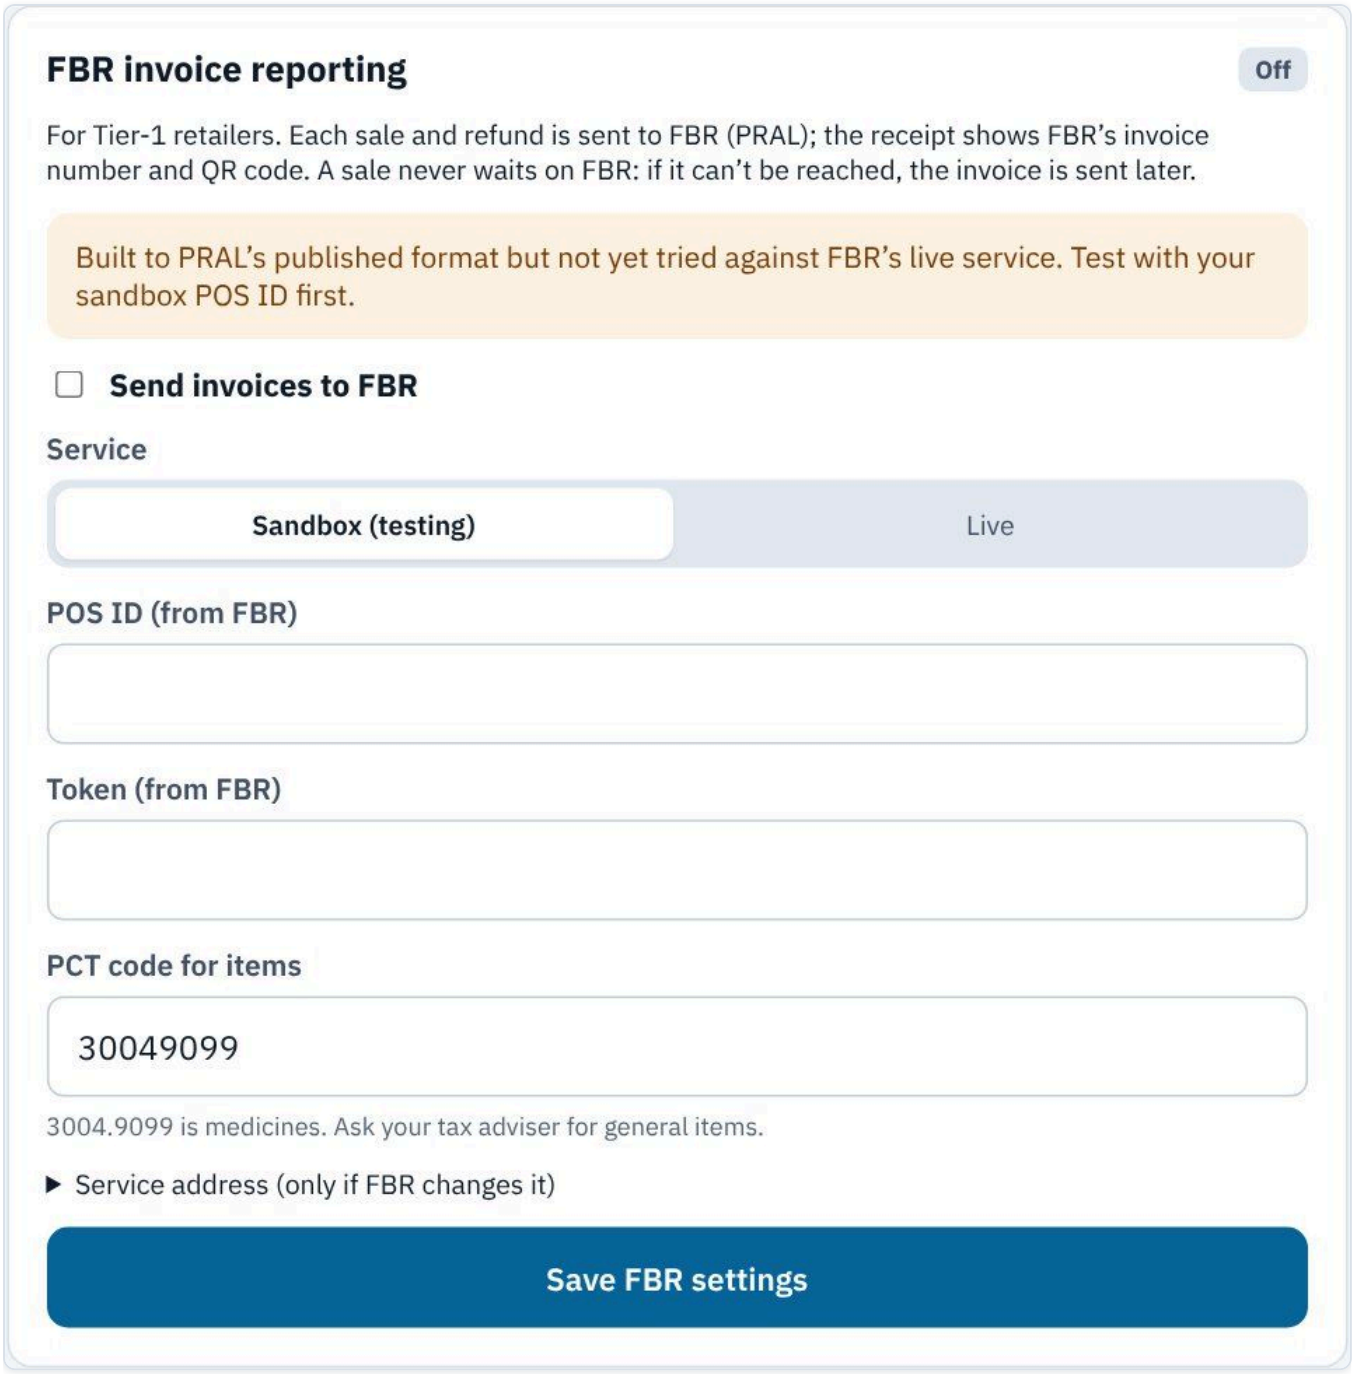

Figure 51 · FBR invoice reporting (PRAL)

For Tier-1 retailers who must report every sale to FBR. When on, each sale and refund is sent to FBR (PRAL) and the receipt shows FBR's invoice number and QR code. A sale never waits for FBR: if FBR can't be reached the invoice is queued and sent later.

Send invoices to FBR	Turns reporting on.
Service	**Sandbox (testing)** first, then **Live** once FBR approves you.
POS ID (from FBR)	The POS ID FBR gave you for this store.
Token (from FBR)	Your API token. Kept on this PC only.

PCT code for items	Tariff code sent with each item. `3004.9099` is medicines; ask your tax adviser for general items.
Service address	Only change if FBR changes its address.
Save FBR settings	Saves. Invoices that couldn't be sent are listed with **Send waiting invoices now**.

IMPORTANT

Test with your sandbox POS ID before switching to Live.

CHAPTER 11

Daily routines

Opening the shop

1. Switch on the **main PC first**, then the extra tills.
2. Each cashier signs in and enters the opening cash.
3. Check the connection badge is green on every till.
4. Owner: glance at **Dashboard → Expiring within 90 days** and move those items to the front.

During the day

1. Receive every delivery as a **GRN** with batch and expiry.
2. Record shop costs in **Expenses** or as **Cash out**.
3. Put khata payments in **Receive payment**.
4. Check **Low stock** before calling the distributor.

Closing the shop

1. Each cashier **closes their shift**, counts notes and prints the Z-report.
2. Owner: open **Activity log → Needs attention**.
3. Check the cloud status says *Cloud backed up*.
4. Shut down extra tills first, the main PC last.

Weekly / monthly

1. Count one or two racks each week with **Stock count**.
2. Run the **Expiry report** and return expiring stock to suppliers.
3. Send **WhatsApp reminders** to overdue khata customers.
4. Pay suppliers from **Supplier payables**.
5. Copy a daily backup file to USB.

CHAPTER 12

Troubleshooting & questions

Q An extra till says "Can't reach the main PC".

Check the main PC is on and Bizflow POS is open on it, and that both are on the same Wi-Fi/network. If the main PC's address changed, use **Change this computer's setup** and type the new address. Give the main PC a fixed IP in your router so this doesn't happen again. Meanwhile the extra till can keep selling offline.

Q The receipt doesn't print.

Owner: open **Printer** on that till, choose the right printer and paper width, and press **Print test receipt**. Make sure the printer is switched on, has paper and is installed in Windows.

Q The scanner adds nothing.

Click in the search box (or press F2) and scan again. If the item is not found, the barcode is not saved on any product: add it in **Edit product → Barcodes**.

Q A cashier forgot their PIN.

Owner: **Store, Users & Settings → Users → Edit**, type a new PIN and save.

Q The owner forgot the password.

On the main PC tap **Forgot password?** and type the recovery code. Without a recovery code, contact your Bizflow support person.

Q Stock on screen doesn't match the shelf.

Look at **Stock changes** on the product to see what happened, then fix it with **Correct** or a stock count. Check that deliveries were received as GRNs and returns were done on the returns screen.

Q Cash is short at closing.

Recount once. Check the Z-report's cash out and refunds lines and the activity log for that shift. Write the reason in the note.

Q Windows says the installer is unsafe.

Click **More info → Run anyway**. The installer is not code-signed yet.

Q We are moving the main PC to a new computer.

With cloud backup: install on the new PC, choose *This is the main PC*, then **Restore from cloud backup**. Without it: copy the latest daily backup file to the new PC and ask your support person to restore it.

Bizflow Tech

Bizflow POS — made for Pakistani medical and general stores.
